This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world’s books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that’s often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book’s long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ Make non-commercial use of the files We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ Refrain from automated querying Do not send automated queries of any sort to Google’s system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ Maintain attribution The Google “watermark” you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can’t offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book’s appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google’s mission is to organize the world’s information and to make it universally accessible and useful. Google Book Search helps readers discover the world’s books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at [http://books.google.com/](http://books.google.com/)
FURNISHING
THE HOME
OF
GOOD TASTE
A principle which can be applied to both large and small houses is shown in the beauty of the panel spacing and the adequate support of the cornice by the pilasters.

FURNISHING
THE HOME
OF
GOOD TASTE
Preface

To try to write a history of furniture in a fairly short space is almost as hard as the square peg and round hole problem. No matter how one tries, it will not fit. One has to leave out so much of importance, so much of historic and artistic interest, so much of the life of the people that helps to make the subject vivid, and has to take so much for granted, that the task seems almost impossible. In spite of this I shall try to give in the following pages a general but necessarily short review of the field, hoping that it may help those wishing to furnish their homes in some special period style. The average person cannot study all the subject thoroughly, but it certainly adds interest to the problems of one's own home to know something of how the great periods of decoration grew one from another, how the influence of art in one country made itself felt in the next, molding and changing taste and educating the people to a higher sense of beauty.

It is the lack of general knowledge which makes it possible for furniture built on amazingly bad lines to be sold masquerading under the name of some great period. The customer soon becomes bewildered, and, unless he has a decided taste of his own, is apt to get something which will
prove a white elephant on his hands. One must have some standard of comparison, and the best and simplest way is to study the great work of the past. To study its rise and climax rather than the decline; to know the laws of its perfection so that one can recognize the exaggeration which leads to degeneracy. This ebb and flow is most interesting: the feeling the way at the beginning, ever growing surer and surer until the high level of perfection is reached; and then the desire to "gild the lily" leading to over-ornamentation, and so to decline. However, the germ of good taste and the sense of truth and beauty is never dead, and asserts itself slowly in a transition period, and then once more one of the great periods of decoration is born.

There are several ways to study the subject, one of the pleasantest naturally being travel, as the great museums, palaces, and private collections of Europe offer the widest field. In this country, also, the museums and many private collections are rich in treasures, and there are many proud possessors of beautiful isolated pieces of furniture. If one cannot see originals the libraries will come to the rescue with many books showing research and a thorough knowledge and appreciation of the beauty and importance of the subject in all its branches.

I have tried to give an outline (which I hope the reader will care to enlarge for himself), not from a collector's standpoint, but from the standpoint of the modern home-maker,
PREFACE

iii
to help him furnish his house consistently,—to try to spread the good word that period furnishing does not necessitate great wealth, and that it is as easy and far more interesting to furnish a house after good models, as to have it banal and commonplace.

The first part of this little book is devoted to a short review of the great periods, and the second part is an effort to help adapt them to modern needs, with a few chapters added of general interest to the home-maker.

A short bibliography is also added, both to express my thanks and indebtedness to many learned and delightful writers on this subject of house furnishing in all its branches, and also as a help to others who may wish to go more deeply into its different divisions than is possible within the covers of a book.

I wish to thank the Editors of House and Garden and The Woman's Home Companion for kindly allowing me to reprint articles and portions of articles which have appeared in their magazines.

I wish also to thank the owners of the different houses illustrated, and Messrs. Trowbridge and Livingston, architects, for their kindness in allowing me to use photographs.

Thanks are also due Messrs. Bergen & Orsenigo, Nahon & Company, Tiffany Studios, Joseph Wild & Co. and the John Somma Co. for the use of photographs to illustrate the reproduction of period furniture and rugs of different types.
Egypt and Greece
Egypt and Greece

The early history of art in all countries is naturally connected more closely with architecture than with decoration, for architecture had to be developed before the demand for decoration could come. But the two have much in common. Noble architecture calls for noble decoration. Decoration is one of the natural instincts of man, and from the earliest records of his existence we find him striving to give expression to it, we see it in the scratched pieces of bone and stone of the cave dwellers, in the designs of savage tribes, and in Druidical and Celtic remains, and in the great ruins of Yucatan. The meaning of these monuments may be lost to us, but we understand the spirit of trying to express the sense of beauty in the highest way possible, for it is the spirit which is still moving the world, and is the foundation of all worthy achievement.

Egypt and Assyria stand out against the almost impenetrable curtain of pre-historic days in all the majesty of their so-called civilization. Huge, massive, aloof from the world, their temples and tombs and ruins remain. Research has given us the key to their religion, so we understand much of the meaning of their wall-paintings and the buildings themselves. The belief of the Egyptian that life was a short passage and his house a mere stopping-place on the
way to the tomb, which was to be his permanent dwelling-place, explains the great care and labor spent on the pyramids, chapels, and rock sepulchers. They embalmed the dead for all eternity and put statues and images in the tombs to keep the mummy company. Colossal figures of their gods and goddesses guarded the tombs and temples, and still remain looking out over the desert with their strange, inscrutable Egyptian eyes. The people had technical skill which has never been surpassed, but the great size of the pyramids and temples and sphinxes gives one the feeling of despotism rather than civilization; of mass and permanency and the wonder of man’s achievement rather than beauty, but they personify the mystery and power of ancient Egypt.

The columns of the temples were massive, those of Karnak being seventy feet high, with capitals of lotus flowers and buds strictly conventionalized. The walls were covered with hieroglyphics and paintings. Perspective was never used, and figures were painted side view except for the eye and shoulder. In the tombs have been found many household belongings, beautiful gold and silver work, beside the offerings put there to appease the gods. Chairs have been found, which, humorous as it may sound, are certainly the ancestors of Empire chairs made thousands of years later. This is explained by the influence of Napoleon’s Egyptian campaign, but there is something in common between the
two times so far apart, of ambition and pride, of grandeur and colossal enterprise.

Greece may well be called the Mother of Beauty, for with the Greeks came the dawn of a higher civilization, a striving for harmony of line and proportion, an ideal clear, high and persistent. When the Dorians from the northern part of Greece built their simple, beautiful temples to their gods and goddesses they gave the impetus to the movement which brought forth the highest art the world has known. Traces of Egyptian influence are to be found in the earliest temples, but the Greeks soon rose to their own great heights. The Doric column was thick, about six diameters in height, fluted, growing smaller toward the top, with a simple capital, and supported the entablature. The horizontal lines of the architrave and cornice were more marked than the vertical lines of the columns. The portico with its row of columns supported the pediment. The Parthenon is the most perfect example of the Doric order, and shattered as it is by time and man it is still one of the most beautiful buildings in the world. It was built in the time of Pericles, from about 460 to 435 B.C., and the work was superintended by Phidias, who did much of the work himself and left the mark of his genius on the whole.

The Ionic order of architecture was a development of the Doric, but was lighter and more graceful. The columns were more slender and had a greater number of flutes and
the capitals formed of scrolls or volutes were more ornamental.

The Corinthian order was more elaborate than the Ionic as the capitals were foliated (the acanthus being used), the columns higher, and the entablature more richly decorated. This order was copied by the Romans more than the other two as it suited their more florid taste. All the orders have the horizontal feeling in common (as Gothic architecture has the vertical), and the simple plan with its perfect harmony of proportion leaves no sense of lack of variety.

The perfection attained in architecture was also attained in sculpture, and we see the same aspiration toward the ideal, the same wonderful achievement. This purity of taste of the Greeks has formed a standard to which the world has returned again and again and whose influence will continue to be felt as long as the world lasts.

The minor arts were carried to the same state of perfection as their greater sisters, for the artists and artisans had the same noble ideal of beauty and the same unerring taste. We have carved gems and coins, and wonderful gold ornaments, painted and silver vases, and terra-cotta figurines, to show what a high point the household arts reached. No work of the great Grecian painters remains; Apelles, Zeuxis, are only names to us, but from the wall paintings at Pompeii where late Greek influence was strongly felt we can imagine how charming the decorations must have been. Egypt and Greece were the torch bearers of civilization.
The Renaissance in Italy
The Renaissance in Italy

The Gothic period has been treated in later chapters on France and England, as it is its development in these countries which most affects us, but the Renaissance in Italy stands alone. So great was its strength that it could supply both inspiration and leaders to other countries, and still remain preëminent.

It was in the fifteenth and sixteenth centuries that this great classical revival in Italy came, this re-birth of a true sense of beauty which is called the Renaissance. It was an age of wonders, of great artistic creations, and was one of the great epochs of the world, one of the turning points of human existence. It covered so large a field and was so many-sided that only careful study can give a full realization of the giants of intellect and power who made its greatness, and who left behind them work that shows the very quintessence of genius.

Italy, stirring slightly in the fourteenth century, woke and rose to her greatest heights in the fifteenth and sixteenth. The whole people responded to the new joy of life, the love of learning, the expression of beauty in all its forms. All notes were struck,—gay, graceful, beautiful, grave, cruel, dignified, reverential, magnificent, but all with
an exuberance of life and power that gave to Italian art its great place in human culture. The great names of the period speak for themselves,—Michelangelo, Raphael, Botticelli, Titian, Leonardo da Vinci, Andrea del Sarto, Machiavelli, Benvenuto Cellini, and a host of others.

The inspiration of the Renaissance came largely from the later Greek schools of art and literature, Alexandria and Rhodes and the colonies in Sicily and Italy, rather than ancient Greece. It was also the influence which came to ancient Rome at its most luxurious period. The importance of the taking of Alexandria and Constantinople in 1453 must not be underestimated, as it drove scholars from the great libraries of the East carrying their manuscripts to the nobles and priests and merchant princes of Italy who thus became enthusiastic patrons of learning and art. This later type of Greek art lacked the austerity of the ancient type, and to the models full of joy and beauty and suffering, the Italians of the Renaissance added the touch of their own temperament and made them theirs in the glowing, rich and astounding way which has never been equaled and probably never will be. Perfection of line and beauty was not sufficient, the soul with its capacity for joy and suffering, “the soul with all its maladies” as Pater says, had become a factor. The impression made upon Michelangelo by seeing the Laocoön disinterred is vividly described by Longfellow—
Trumbidge & Livingston, architects

An exquisite and true Renaissance feeling is shown in the pilasters
The Italian Renaissance is still inspiring the world. In the two doorways the use of pilasters and frieze, and the pedimented and round over-door motifs are typical of the period.
"Long, long years ago,
Standing one morning near the Baths of Titus,
I saw the statue of Laocoon
Rise from its grave of centuries like a ghost
Writhing in pain; and as it tore away
The knotted serpents from its limbs, I heard,
Or seemed to hear, the cry of agony
From its white parted lips. And still I marvel
At the three Rhodian artists, by whose hands
This miracle was wrought. Yet he beholds
Far nobler works who looks upon the ruins
Of temples in the Forum here in Rome.
If God should give me power in my old age
To build for him a temple half as grand
As those were in their glory, I should count
My age more excellent than youth itself,
And all that I have hitherto accomplished
As only vanity."

"It was an age productive in personalities, many-sided,
centralized, complete. Artists and philosophers and those
whom the action of the world had elevated and made keen,
breathed a common air and caught light and heat from each
other's thoughts. It is this unity of spirit which gives unity
to all the various products of the Renaissance, and it is to
this intimate alliance with mind, this participation in the
best thoughts which that age produced, that the art of Italy
in the fifteenth century owes much of its grave dignity and
influence." *

It is to this unity of the arts we owe the fact that the art of beautifying the home took its proper place. During the Middle Ages the Church had absorbed the greater part of the best man had to give, and home life was rather a hit or miss affair, the house was a fortress, the family possessions so few that they could be packed into chests and easily moved. During the Renaissance the home ideal grew, and, although the Church still claimed the best, home life began to have comforts and beauties never dreamed of before. The walls glowed with color, tapestries and velvets added their beauties, and the noble proportions of the marble halls made a rich background for the elaborately carved furniture.

The doors of Italian palaces were usually inlaid with woods of light shade, and the soft, golden tone given by the process was in beautiful, but not too strong, contrast with the marble architrave of the doorway, which in the fifteenth century was carved in low relief combined with disks of colored marble, sliced, by the way, from Roman temple pillars. Later as the classic taste became stronger the carving gave place to a plain architrave and the over-door took the form of a pediment.

Mantels were of marble, large, beautifully carved, with the fireplace sunk into the thickness of the wall. The overmantel usually had a carved panel, but later, during the sixteenth century, this was sometimes replaced by a picture. The windows of the Renaissance were a part of the decora-
tion of the room, and curtains were not used in our modern manner, but served only to keep out the draughts. In those days the better the house the simpler the curtains. There were many kinds of ceilings used, marble, carved wood, stucco, and painting. They were elaborate and beautiful, and always gave the impression of being perfectly supported on the well-proportioned cornice and walls. The floors were usually of marble. Many of the houses kept to the plan of mediaeval exteriors, great expanses of plain walls with few openings on the outsides, but as they were built around open courts, the interiors with their colonnades and open spaces showed the change the Renaissance had brought. The Riccardi Palace in Florence and the Palazzo della Cancelleria in Rome, are examples of this early type. The second phase was represented by the great Bramante, whose theory of restraining decoration and emphasizing the structure of the building has had such important influence. One of his successors was Andrea Palladio, whose work made such a deep impression on Inigo Jones. The Library of St. Mark's at Venice is a beautiful example of this part. The third phase was entirely dominated by Michelangelo.

The furniture, to be in keeping with buildings of this kind, was large and richly carved. Chairs, seats, chests, cabinets, tables, and beds, were the chief pieces used, but they were not plentiful at all in our sense of the word. The chairs and benches had cushions to soften the hard wooden
seats. The stuffs of the time were most beautiful Genoese velvet, cloth of gold, tapestries, and wonderful embroideries, all lending their color to the gorgeous picture. The carved marriage chest, or cassone, is one of the pieces of Renaissance furniture which has most often descended to our own day, for such chests formed a very important part of the furnishing in every household, and being large and heavy, were not so easily broken as chairs and tables. Beds were huge, and were architectural in form, a base and roof supported on four columns. The classical orders were used, touched with the spirit of the time, and the fluted columns rose from acanthus leaves set in an urn supported on lion's feet. The tester and cornice gave scope for carving and the panels of the tester usually had the lovely scrolls so characteristic of the period. The headboard was often carved with a coat-of-arms and the curtains hung from inside the cornice.

Grotesques were largely used in ornament. The name is derived from grottoes, as the Roman tombs being excavated at the time were called, and were in imitation of the paintings found on their walls, and while they were fantastic, the word then had no unkindly humorous meaning as now. Scrolls, dolphins, birds, beasts, the human figure, flowers, everything was called into use for carving and painting by genius of the artisans of the Renaissance. They loved their work and felt the beauty and meaning of every
line they made, and so it came about that when, in the course of years, they traveled to neighboring countries, they spread the influence of this great period, and it is most interesting to see how on the Italian foundation each country built her own distinctive style.

Like all great movements the Renaissance had its begin-
ning, its splendid climax, and its decline.
The Development of Decoration in France
The Development of Decoration in France

WHEN Caesar came to Gaul he did more than see and conquer; he absorbed so thoroughly that we have almost no knowledge of how the Gauls lived, so far as household effects were concerned. The character which descended from this Gallo-Roman race to the later French nation was optimistic and beauty-loving, with a strength which has carried it through many dark days. It might be said to be responsible for the French sense of proportion and their freedom of judgment which has enabled them to hold their important place in the history of art and decoration. They have always assimilated ideas freely but have worked them over until they bore the stamp of their own individuality, often gaining greatly in the process.

One of the first authentic pieces of furniture is a bahut or chest dating from sometime in the twelfth century and belonging to the Church of Obazine. It shows how furniture followed the lines of architecture, and also shows that there was no carving used on it. Large spaces were probably covered with painted canvas, glued on. Later, when panels became smaller and the furniture designs were modi-
fied, moldings, etc., began to be used. These bahuts or huches, from which the term huckiers came (meaning the Corporation of Carpenters), were nothing more than chests standing on four feet. From all sources of information on the subject it has been decided that they were probably the chief pieces of furniture the people had. They served as a seat by day and, with cushions spread upon them, as a bed by night. They were also used as tables with large pieces of silver dressé or arranged upon them in the daytime. From this comes our word "dresser" for the kitchen shelves. In those days of brigands and wars and sudden death, the household belongings were as few as possible so that the trouble of speedy transportation would be small, and everything was packed into the chests. As the idea of comfort grew a little stronger, the number of chests grew, and when a traveling party arrived at a stopping-place, out came the tapestries and hangings and cushions and silver dishes, which were arranged to make the rooms seem as cheerful as possible. The germ of the home ideal was there, at least, but it was hard work for the arras and the "ciel" to keep out the cold and cover the bare walls. When life became a little more secure and people learned something of the beauty of proportion, the rooms showed more harmony in regard to the relation of open spaces and walls, and became a decoration in themselves, with the tapestries and hangings enhancing their beauty of line. It was not until some time in the fif-
teenth century that the habit of traveling with all one's belongings ceased.

The year 1000 was looked forward to with abject terror, for it was firmly believed by all that the world was then coming to an end. It cast a gloom over all the people and paralyzed all ambition. When, however, the fatal year was safely passed, there was a great religious thanksgiving and everyone joined in the praise of a merciful God. The semi-circular arch of the Romanesque style gave way to the pointed arch of the Gothic, and wonderful cathedrals slowly lifted their beautiful spires to the sky. The ideal was to build for the glory of God and not only for the eyes of man, so that exquisite carving was lavished upon all parts of the work. This deeply reverent feeling lasted through the best period of Gothic architecture, and while household furniture was at a standstill church furniture became more and more beautiful, for in the midst of the religious fervor nothing seemed too much to do for the Church. Slowly it died out, and a secular attitude crept into decoration. One finds grotesque carvings appearing on the choir stalls and other parts of churches and cathedrals and the standard of excellence was lowered.

The chest, table, wooden arm-chair, bed, and bench, were as far as the imagination had gone in domestic furniture, and although we read of wonderful tapestries and leather hangings and clothes embroidered in gold and jewels, there was
no comfort in our sense of the word, and those brave knights and fair ladies had need to be strong to stand the hardships of life. Glitter and show was the ideal and it was many more years before the standard of comfort and refinement gained a firm foothold.

Gothic architecture and decoration declined from the perfection of the thirteenth and fourteenth centuries to the over-decorated, flamboyant Gothic of the fifteenth century, and it was in the latter period that the transition began between the Gothic and the Renaissance epochs.

The Renaissance was at its height in Italy in the fifteenth century, and its influence began to make itself felt a little in France at that time.

When the French under Louis XII seized Milan, the magnificence of the court of Ludovico Sforza, the great duke of Milan, made such an impression on them that they could not rest content with the old order, and took home many beautiful things. Italian artisans were also imported, and as France was ready for the change, their lessons were learned and the French Renaissance came slowly into existence. This transition is well shown by the Chateau de Gaillon, built by Cardinal d'Amboise. Gothic and Renaissance decoration were placed side by side in panels and furniture, and we also find some pure Gothic decoration as late as the early part of the sixteenth century, but they were in parts of France where tradition changed slowly. Styles
overlap in every transition period, so it is often difficult to place the exact date on a piece of furniture; but the old dies out at last and gives way to the new.

With the accession of Francis I in 1515 the Renaissance came into its own in France. He was a great patron of art and letters, and under his fostering care the people knew new luxuries, new beauties, and new comforts. He invited Andrea del Sarto and Leonardo da Vinci to come to France. The word Renaissance means simply revival and it is not correctly used when we mean a distinct style led or inspired by one person. It was a great epoch, with individuality as its leading spirit, led by the inspiration of the Italian artists brought from Italy and molded by the genius of France. This renewal of classic feeling came at the psychological moment, for the true spirit of the great Gothic period had died. The Renaissance movements in Italy, France, England and Germany all drew their inspiration from the same source, but in each case the national characteristics entered into the treatment. The Italians and Germans both used the grotesque a great deal, but the Germans used it in a coarser and heavier way than the Italians, who used it esthetically. The French used more especially conventional and beautiful floral forms, and the inborn French sense of the fitness of things gave the treatment a wonderful charm and beauty. If one studies the French chateaux one will feel the true beauty and spirit of the times—Blois with its history of
many centuries, and then some of the purely Renaissance chateaux, like Chambord. Although great numbers of Italian artists came to France, one must not think they did all the beautiful work of the time. The French learned quickly and adapted what they learned to their own needs, so that the delicate and graceful decorations brought from Italy became more and more individualized until in the reign of Henry II the Renaissance reached its high-water mark.

The furniture of the time did not show much change or become more varied or comfortable. It was large and solid and the chairs had the satisfactory effect of good proportion, while the general squareness of outline added to the feeling of solidity. Oak was used, and later walnut. The chair legs were straight, and often elaborately turned, and usually had strainers or under framing. Cushions were simply tied on at first, but the knowledge of upholstering was gaining ground, and by the time of Louis XIII was well understood. Cabinets had an architectural effect in their design. The style of the decorative motive changed, but it is chiefly in architecture and the decorative treatment of it that one sees the true spirit of the Renaissance. Two men who had great influence on the style of furniture of the time were Androuet du Cerceau and Hugues Sambin. They published books of plates that were eagerly copied in all parts of France. Sambin's influence can be traced in the later style of Louis XIV.
Louis XIII chair now in the Cluny Museum showing the Flemish influence.

A typical Louis XIII chair, many of which were covered with velvet or tapestry.
This Gothic chair of the 16th century shows the beautiful linen-fold design in the carving on the lower panels, and also the keyhole which made the chest safe when traveling.
The marriage of Henry II and Catherine de Medici naturally continued the strong Italian influence. The portion of the Renaissance called after Henry II lasted about seventy-five years, and corresponds with the Elizabethan period in England.

During the regency of Marie de Medici, Flemish influence became very strong, as she invited Rubens to Paris to decorate the Luxembourg. There were also many Italians called to do the work, and as Rubens had studied in Italy, Italian influence was not lacking.

Degeneracy began during the reign of Henry IV, as ornament became meaningless and consistency of decoration was lost in a maze of superfluous design.

It was in the reign of Louis XIII that furniture for the first time became really comfortable, and if one examines the engravings of Abraham Bosse one will see that the rooms have an air of homeliness as well as richness. The characteristic chair of the period was short in the back and square in shape — it was usually covered with leather or tapestry, fastened to the chair with large brass nails, and the back and seat often had a fringe. A set of chairs usually consisted of arm-chairs, plain chairs, folding stools and a lit-de-repos. Many of the arm-chairs were entirely covered with velvet or tapestry, or, if the woodwork showed, it was stained to harmonize with the covering on the seat and back.

The twisted columns used in chairs, bedposts, etc., were
borrowed from Italy and were very popular. Another shape often used for chair legs was the X that shows Flemish influence. The *lit-de-repos*, or *chaise-longue*, was a seat about six feet long, sometimes with arms and sometimes not, and with a mattress and bolster. The beds were very elaborate and very important in the scheme of decoration, as the ladies of the time held receptions in their bedrooms and the king and nobles gave audiences to their subjects while in bed. These latter were therefore necessarily furnished with splendor. The woodwork was usually covered with the same material as the curtains, or stained to harmonize. The canopy never reached to the ceiling but was, from floor to top, about 7 ft. 3 in. high, and the bed was 6½ ft. square. The curtains were arranged on rods and pulleys, and when closed this "*lit en housse*" looked like a huge square box. The counterpane, or "*couverture de parade;*" was of the curtain material. The four corners of the canopy were decorated with bunches of plumes or panache, or with a carved wooden ornament called pomme, or with a "*bouquet*" of silk. The beds were covered with rich stuffs, like tapestry, silk, satin, velvet, cloth-of-gold and silver, etc., all of which were embroidered or trimmed with gold or silver lace. One of the features of a Louis XIII room was the tapestry and hangings. A certain look of dignity was given to the rooms by the general square and heavy outlines of the furniture and the huge chimney-pieces.
THE DEVELOPMENT OF DECORATION IN FRANCE

The taste for cabinets kept up and the cabinets and presses were large, sometimes divided into two parts, sometimes with doors, sometimes with open frame underneath. The tables were richly carved and gilded, often ornamented with bronze and copper. The cartouche was used a great deal in decoration, with a curved surface. This rounded form appears in the posts used in various kinds of furniture. When rectangles were used they were always broader than high. The garlands of fruit were heavy, the cornucopias were slender, with an astonishing amount of fruit pouring from them, and the work was done in rather low relief. Carved and gilded mirrors were introduced by the Italians as were also sconces and glass chandeliers. It was a time of great magnificence, and shadowed forth the coming glory of Louis XIV. It seems a style well suited to large dining-rooms and libraries in modern houses of importance.
Louis XIV
Louis XIV

It is often a really difficult matter to decide the exact boundary lines between one period and another, for the new style shows its beginnings before the old one is passed, and the old style still appears during the early years of the new one. It is an overlapping process and the years of transition are ones of great interest. As one period follows another it usually shows a reaction from the previous one; a somber period is followed by a gay one; the excess of ornament in one is followed by restraint in the next. It is the same law that makes us want cake when we have had too much bread and butter.

The world has changed so much since the seventeenth and eighteenth centuries that it seems almost impossible that we should ever again have great periods of decoration like those of Louis XIV, Louis XV and Louis XVI. Then the monarch was supreme. "L'état c'est moi," said Louis XIV, and it was true. He established the great Gobelin works on a basis that made France the authority of the world and firmly imposed his taste and his will on the country. Now that this absolute power of one man is a thing of the past, we have the influence of many men forming and molding something that may turn into a beautiful epoch of decora-
tion, one that will have in it some of the feeling that brought the French Renaissance to its height, though not like it, for we have the same respect for individuality working within the laws of beauty that they had.

The style that takes its name from Louis XIV was one of great magnificence and beauty with dignity and a certain solidity in its splendor. It was really the foundation of the styles that followed, and a great many people look upon the periods of Louis XIV, the Regency, Louis XV and Louis XVI as one great period with variations, or ups and downs — the complete swing and return of the pendulum.

Louis XIV was a man with a will of iron and made it absolute law during his long reign of seventy-two years. His ideal was splendor, and he encouraged great men in the intellectual and artistic world to do their work, and shed their glory on the time. Condé, Turenne, Colbert, Molière, Corneille, La Fontaine, Racine, Fénélon, Boulle, Le Brun, are a few among the long and wonderful list. He was indeed Louis the Magnificent, the Sun King.

One of the great elements toward achieving the stupendous results of this reign was the establishment of the "Manufacture des Meubles de la Couronne," or, as it is usually called, "Manufacture des Gobelins." Artists of all kinds were gathered together and given apartments in the Louvre and the wonderfully gifted and versatile Le Brun was put at the head. Tapestry, goldsmiths' work, furniture, jew-
elry, etc., were made, and with the royal protection and interest France rose to the position of world-wide supremacy in the arts. Le Brun had the same taste and love of magnificence as Louis, and had also extraordinary executive ability and an almost unlimited capacity for work, combined with the power of gathering about him the most eminent artists of the time. André Charles Boulle was one, and his beautiful cabinets, commodes, tables, clocks, etc., are now almost priceless. He carried the inlay of metals, tortoise-shell, ivory and beautiful woods to its highest expression, and the mingling of colors with the exquisite workmanship gave most wonderful effects. Sheets of white metal or brass were glued together and the pattern was then cut out. When taken apart the brass scrolls could be fitted exactly into the shell background, and the shell scrolls into the brass background, thus making two decorations. The shell background was the more highly prized. The designs usually had a Renaissance feeling. The metal was softened in outline by engraving, and then ormolu mounts were added. Ormolu or gilt bronze mounts, formed one of the great decorations of furniture. The most exquisite workmanship was lavished on them, and after they had been cast they were cut and carved and polished until they became worthy ornaments for beautiful inlaid tables and cabinets. The taste for elaborately carved and gilded frames to chairs, tables, mirrors, etc., developed rapidly. Mirrors
were made by the Gobelins works and were much less expensive than the Venetian ones of the previous reign. Walls were painted and covered with gold with a lavish hand. Tapestries were truly magnificent with gold and silver threads adding richness to their beauty of color, and were used purely as a decoration as well as in the old utilitarian way of keeping out the cold. The Gobelins works made at this time some of the most beautiful tapestries the world has known. The massive chimney-pieces were superseded by the "petite-cheminée," and had great mirrors over them or elaborate over-mantels. The whole air of furnishing and decoration changed to one of greater lightness and brilliancy. The ideal was that everything, no matter how small, must be beautiful, and we find the most exquisite workmanship lavished on window-locks and door-knobs.

In the early style of Louis XIV, we find many trophies of war and mythological subjects used in the decorative schemes. The second style of this period was a softening and refining of the earlier one, becoming more and more delicate until it merged into the time of the Regency. It was during the reign of Louis XIV that the craze for Chinese decoration first appeared. La Chinoiserie it was called, and it has daintiness and a curious fascination about it, but many inappropriate things were done in its name. The furniture of the time was firmly placed upon the ground, the arm-chairs had strong straining-rails, square or curved
One of a set of three rare Louis XIV chairs, beautifully carved and gilded, and said to have belonged to the great Louis himself.

Inlaid desk with beautifully chiselled ormolu mounts

Rare Louis XIV chair, showing the characteristic underbracing
backs, scroll arms carved and partly upholstered and stuffed seats and backs. The legs of chairs were usually tapering in form and ornamented with gilding, or marquetry, or richly carved, and later the feet ended in a carved leaf design. Some of the straining-rails were in the shape of the letter X, with an ornament at the intersection, and often there was a wooden molding below the seat in place of fringe. Many carved and gilded chairs had gold fringe and braid and were covered with velvet, tapestry or damask.

There were many new and elaborate styles of beds that came into fashion at this time. There was the lit d'ange, which had a canopy that did not extend over the entire bed, and had no pillars at the foot, the curtains were drawn back at the head and the counterpane went over the foot of the bed. There was the lit d'alcove, the lit de bout, lit clos, lit de glace, with a mirror framed in the ceiling, and many others. A lit de parade was like the great bed of Louis XIV at Versailles.

Both the tall and bracket clocks showed this same love of ornament and they were carved and gilded and enriched with chased brass and wonderful inlay by Boulle. The dials also were beautifully designed. Consoles, tables, cabinets, etc., were all treated in this elaborate way. Many of the ceilings were painted by great artists, and those at Versailles, painted by Le Brun and others, are good examples. There was always a combination of the straight line and the curve,
a strong feeling of balance, and a profusion of ornament in
the way of scrolls, garlands, shells, the acanthus, anthemion,
etc. The moldings were wide and sometimes a torus of
laurel leaves was used, but in spite of the great amount of
ornament lavished on everything, there is the feeling of bal-
ance and symmetry and strength that gives dignity and
beauty.

Louis was indeed fortunate in having the great Colbert
for one of his ministers. He was a man of gigantic intel-
lect, capable of originating and executing vast schemes. It
was to his policy of state patronage, wisely directed, and
energetically and lavishly carried out, that we owe the
magnificent achievements of this period.

Everywhere the impression is given of brilliancy and splen-
dor—gold on the walls, gold on the furniture, rich velvets
and damasks and tapestries, marbles and marquetry and
painting, furniture worth a king's ransom. It all formed
a beautiful and fitting background for the proud king, who
could do no wrong, and the dazzling, care-free people who
played their brilliant, selfish parts in the midst of its splen-
dor. They never gave a thought to the great mass of the
common people who were over-burdened with taxation; they
never heard the first faint mutterings of discontent which
were to grow, ever louder and louder, until the blood and
horror of the Revolution paid the debt.
The Regency and Louis XV
The Regency and Louis XV

When Louis XIV died in 1715, his great-grandson, Louis XV, was but five years old, so Philippe, Duc d'Orleans, became Regent. During the last years of Louis XIV's life the court had resented more or less the gloom cast over it by the influence of Madame de Maintenon, and turned with avidity to the new ruler. He was a vain and selfish man, feeling none of the responsibilities of his position, and living chiefly for pleasure. The change in decoration had been foreshadowed in the closing years of the previous reign, and it is often hard to say whether a piece of furniture is late Louis XIV or Regency.

The new gained rapidly over the old, and the magnificent and stately extravagance of Louis XIV turned into the daintier but no less extravagant and rich decoration of the Regency and Louis XV. One of the noticeable changes was that rooms were smaller, and the reign of the boudoir began. It has been truly said that after the death of Louis XIV "came the substitution of the finery of coquetry for the worship of the great in style." There was greater variety in the designs of furniture and a greater use of carved metal ornament and gilt bronze, beautifully chased. The ornaments took many shapes, such as shells, shaped foliage,
roses, seaweed, strings of pearls, etc., and at its best there was great beauty in the treatment.

It was during the Regency that the great artist and sculptor in metal, Charles Cressant, flourished. He was made ébeniste of the Regent, and his influence was always to keep up the traditions when the reaction against the severe might easily have led to degeneration. There are beautiful examples of his work in many of the great collections of furniture, notably the wonderful commode in the Wallace collection. The dragon mounts of ormolu on it show the strong influence the Orient had at the time. He often used the figures of women with great delicacy on the corners of his furniture, and he also used tortoise-shell and many colored woods in marquetry, but his most wonderful work was done in brass and gilded bronze.

In 1728, when Louis was thirteen years old, he was declared of age and became king. The influence of the Regent was, naturally, still strong, and unfortunately did much to form the character of the young king. Selfishness, pleasure, and low ideals, were the order of court life, and paved the way for the debased taste for rococo ornament which was one marked phase of the style of Louis XV.

The great influence of the Orient at this time is very noticeable. There had been a beginning of it in the previous reign, but during the Regency and the reign of Louis XV it became very marked. "Singerie" and "Chinoiserie"
were the rage, and gay little monkeys clambered and climbed over walls and furniture with a careless abandon that had a certain fascination and charm in spite of their being monkeys. The "Salon des Singes" in the Chateau de Chantilly gives one a good idea of this. The style was easily overdone and did not last a great while.

During this time of Oriental influence lacquer was much used and beautiful lacquer panels became one of the great features of French furniture. Pieces of furniture were sent to China and Japan to be lacquered and this, combined with the expense of importing it, led many men in France to try to find out the Oriental secret. Le Sieur Dagly was supposed to have imported the secret and was established at the Gobelins works where he made what was called "vernis de Gobelins."

The Martin family evolved a most characteristically French style of decoration from the Chinese and Japanese lacquers. The varnish they made, called "vernis Martin," gave its name to the furniture decorated by them, which was well suited to the dainty boudoirs of the day. All kinds of furniture were decorated in this way — sedan chairs and even snuff-boxes, until at last the supply became so great that the fashion died. There are many charming examples of it to be seen in museums and private collections, but the modern garish copies of it in many shops give no idea of the charm of the original. Watteau's delightful decorations
also give the true spirit of the time, with their gayety and frivolity showing the Arcadian affectations — the fad of the moment.

As the time passed decoration grew more and more ornate, and the followers of Cressant exaggerated his traits. One of these was Jules Aurèle Meissonier, an Italian by birth, who brought with him to France the decadent Italian taste. He had a most marvelous power of invention and lavished ornament on everything, carrying the rocaille style to its utmost limit. He broke up all straight lines, put curves and convolutions everywhere, and rarely had two sides alike, for symmetry had no charms for him. The curved endive decoration was used in architraves, in the panels of overdoors and panel moldings, everywhere it possibly could be used, in fact. His work was in great demand by the king and nobility. He designed furniture of all kinds, altars, sledges, candelabra and a great amount of silversmith's work, and also published a book of designs. Unfortunately it is this rococo style which is meant by many people when they speak of the style of Louis XV.

Louis XV furniture and decoration at its best period is extremely beautiful, and the foremost architects of the day were undisturbed by the demand for rococo, knowing it was a vulgarism of taste which would pass. In France, bad as it was, it never went to such lengths as it did in Italy and Spain.
This valuable example of Regency paneling can be seen at the Metropolitan Museum of Art, New York
Elaborately carved Louis XV console tables can be seen in the background. The charming Gobelin tapestry is "Games of Children." It was cut to fit the different panels.
THE REGENCY AND LOUIS XV

The easy generalization of the girl who said the difference between the styles of Louis XV and Louis XVI was like the difference in hair, one was curly and one was straight, has more than a grain of truth in it. The curved line was used persistently until the last years of Louis XV's time, but it was a beautiful, gracious curve, elaborate, and in furniture, richly carved, which was used during the best period. The decline came when good taste was lost in the craze for rococo.

Chairs were carved and gilded, or painted, or lacquered, and also beautiful natural woods were used. The sofas and chairs had a general square appearance, but the framework was much curved and carved and gilded. They were upholstered in silks, brocades, velvets, damasks in flowered designs, edged with braid. Gobelin, Aubusson and Beauvais tapestry, with Watteau designs, were also used. Nothing more dainty or charming could be found than the tapestry seats and chair backs and screens which were woven especially to fit certain pieces of furniture. The tapestry weavers now used thousands of colors in place of the nineteen used in the early days, and this enabled them to copy with great exactness the charming pictures of Watteau and Boucher. The idea of sitting on beautiful ladies and gentlemen airily playing at country life, does not appeal to our modern taste, but it seems to be in accord with those days.

Desks were much used and were conveniently arranged
with drawers, pigeon-holes and shelves, and roll-top desks were made at this time. Commodes were painted, or richly ornamented with lacquer panels, or panels of rosewood or violet wood, and all were embellished with wonderful bronze or ormolu. Many pieces of furniture were inlaid with lovely Sèvres plaques, a manner which is not always pleasing in effect. There were many different and elaborate kinds of beds, taking their names from their form and draping. "Lit d'anglaise" had a back, head-board and foot-board, and could be used as a sofa. "Lit a Romaine" had a canopy and four festooned curtains, and so on.

The most common form of salon was rectangular, with proportions of 4 to 3, or 2 to 1. There were also many square, round, octagonal and oval salons, these last being among the most beautiful. They all were decorated with great richness, the walls being paneled with carved and gilded — or partially gilded — wood. Tapestry and brocade and painted panels were used. Large mirrors with elaborate frames were placed over the mantels, with panels above reaching to the cornice or cove of the ceiling, and large mirrors were also used over console tables and as panels. The paneled overdoors reached to the cornice, and windows were also treated in this way. Windows and doors were not looked upon merely as openings to admit air and light and human beings, but formed a part of the scheme of decoration of the room. There were beautiful brackets and candelabra
of ormolu to light the rooms, and the boudoirs and salons, with their white and gold and beautifully decorated walls and gilded furniture, gave an air of gayety and richness, extravaganza and beauty.

An apartment in the time of Louis XV usually had a vestibule, rather severely decorated with columns or pilasters and often statues in niches. The first ante-room was a waiting-room for servants and was plainly treated, the woodwork being the chief decoration. The second ante-room had mirrors, console tables, carved and gilded woodwork, and sometimes tapestry was used above a wainscot. Dining-rooms were elaborate, often having fountains and plants in the niches near the buffet. Bedrooms usually had an alcove, and the room, not counting the alcove, was an exact square. The bed faced the windows and a large mirror over a console table was just opposite it. The chimney faced the principal entrance.

A "chambre en niche" was a room where the bed space was not so large as an alcove. The designs for sides of rooms by Meissonier, Blondel, Briseux Cuilles and others give a good idea of the arrangement and proportions of the different rooms. The cabinets or studies, and the garde robes, were entered usually from doors near the alcove. The ceilings were painted by Boucher and others in soft and charming colors, with cupids playing in the clouds, and other subjects of the kind. Great attention was given to clocks
and they formed an important and beautiful part of the decoration.

The natural consequence of the period of excessive rococo with its superabundance of curves and ornament, was that, during the last years of Louis's reign, the reaction slowly began to make itself felt. There was no sudden change to the use of the straight line, but people were tired of so much lavishness and motion in their decoration. There were other influences also at work, for Robert Adam had, in England, established the classic taste, and the excavations at Pompeii were causing widespread interest and admiration. The fact is proved that what we call Louis XVI decoration was well known before the death of Louis XV, by his furnishing Luciennes for Madam Du Barri in almost pure Louis XVI style.
The beautiful proportions of this room and the white and gold paneling make a brilliant setting for the Louis XV furniture.
This Louis XV bergère is especially interesting as it shows the broad seat made to accommodate the full dresses of the period.
Louis XVI
Louis XVI

LOUIS XVI came to the throne in 1774, and reigned for nineteen years, until that fatal year of '98. He was kind, benign, and simple, and had no sympathy with the life of the court during the preceding reign. Marie Antoinette disliked the great pomp of court functions and liked to play at the simple life, so shepherdesses, shepherd's crooks, hats, wreaths of roses, watering-pots and many other rustic symbols became the fashion.

Marie Antionette was but fifteen years old when in 1770 she came to France as a bride, and it is hardly reasonable to think that the taste of a young girl would have originated a great period of decoration, although the idea is firmly fixed in many minds. It is known that the transition period was well advanced before she became queen, but there is no doubt that her simpler taste and that of Louis led them to accept with joy the classical ideas of beauty which were slowly gaining ground. As dauphin and dauphiness they naturally had a great following, and as king and queen their taste was paramount, and the style became established.

Architecture became more simple and interior decoration followed suit. The restfulness and beauty of the straight line appeared again, and ornament took its proper place as a dec-
oration of the construction, and was subordinate to its design. During the period of Louis XVI the rooms had rectangular panels formed by simpler moldings than in the previous reign, with pilasters of delicate design between the panels. The overdoors and mantels were carried to the cornice and the paneling was usually of oak, painted in soft colors or white and gilded. Walls were also covered with tapestry and brocade. Some of the most characteristic marks of the style are the straight tapering legs of the furniture, usually fluted, with some carving. Fluted columns and pilasters often had metal quills filling them for a part of the distance at top and bottom, leaving a plain channel between. The laurel leaf was used in wreath form, and bell flowers were used on the legs of furniture. Oval medallions, surmounted by a wreath of flowers and a bow-knot, appear very often, and in about 1780 round medallions were used. Furniture was covered with brocade or tapestry, with shepherds and shepherdesses or pastoral scenes for the design. The gayest kinds of designs were used in the silks and brocades; ribbons and bow-knots and interlacing stripes with flowers and rustic symbols scattered over them. Curtains were less festooned and cut with great exactness. The canopies of beds became smaller, until often only a ring or crown held the draperies, and it became the fashion to place the bed sideways, "vu de face."
From Versailles. Beautiful paneling was one of the distinctive features of all periods of the 18th century.
The boudoir of Marie Antoinette, showing Pompeian influence
There was a great deal of beautiful ornament in gilded bronze and ormolu on the furniture, and many colored woods were used in marquetry. The fashion of using Sèvres plaques in inlay was continued. There was a great deal of white and colored marble used and very fine ironwork was made. Riesener, Roentgen, Gouthière, Fragonard and Boucher are some of the names that stand out most distinctly as authors of the beautiful decorations of the time. Marie Antoinette's boudoir at Fontainebleau is a perfect example of the style and many of the other rooms both there and at the Petit Trianon show its great beauty, gayety and dignity combined with its richness and magnificence.

The influence of Pompeii must not be overlooked in studying the style of Louis XVI, for it appeared in much of the decoration of the time. The beautiful little boudoir of the Marquise de Sérilly is a charming example of its adaptation. The problem of bad proportion is also most interestingly overcome. The room was too high for its size, so it was divided into four arched openings separated by carved pilasters, and the walls covered with paintings. The ceiling was darker than the walls, which made it seem lower, and the whole color scheme was so arranged that the feeling of extreme height was lessened. The mantel is a beautiful example of the period. This room was furnished about 1780-82.

Compared to the lavish curves of the style of Louis XV,
the fine outlines and the beautiful ornament of Louis XVI appear to some people cold, but if they look carefully at the matter, they will find them not really so. The warmth of the Gallic temperament still shows through the new garb, giving life and beauty to the dainty but strong furniture.

If one studies the examples of the styles of Louis XIV, Louis XV and Louis XVI that one finds in the great palaces, collections, museums and books of prints and photographs, one will see that the wonderful foundation laid by Louis XIV was still there in the other two reigns. During the time of Louis XVI the pose of rustic simplicity was a very sophisticated pose indeed, but the reaction from the rocaille style of Louis XV led to one of the most beautiful styles of decoration that the world has seen. It had dignity, true beauty and the joy of life expressed in it.
The Empire
The Empire

The French Revolution made a tremendous change in the production of beautiful furniture, as royalty and the nobility could no longer encourage it. Many of the great artists died in poverty and many of them went to other countries where life was more secure.

After the Revolution there was wholesale destruction of the wonderful works of art which had cost such vast sums to collect. Nothing was to remain that would remind the people of departed kings and queens, and a committee on art was appointed to make selections of what was to be saved and what was to be destroyed. That committee of "tragic comedians" set up a new standard of art criticism; it was not the artistic merits of a piece of tapestry, for instance, that interested them, but whether a king or queen dared show their heads upon it. If so, into the flames it went. Thousands of priceless things were destroyed before they finished their dreadful work.

When Napoleon came into power he turned to ancient Rome for inspiration. The Imperial Caesars became his ideal and gave him a wide field in which to display his love for splendor, uncontrolled by any true artistic sense. It gave decoration a blow from which it was hard to recover.
Massive furniture without real beauty of line, loaded with ormolu, took the place of the old. The furniture was simple in construction with little carving, until later when all kinds of animal heads and claws, and animals never seen by man, and horns of plenty, were used to support tables and chairs and sofas. Everywhere one turned the feeling of martial grandeur was in the air. Ormolu mounts of bay wreaths, torches, eagles, military emblems and trophies, winged figures, the sphinx, the bee, and the initial N, were used on furniture, and these same motives were used in wall decoration. The furniture was left the natural color of the wood, and mahogany, rosewood, and ebony, were used. Veneer was also extensively used. The front legs of chairs were usually straight, and the back legs slightly curved. Beds were massive, with head and foot-board of even height, and the tops rolled over into a scroll. Swans were used on the arms of chairs and sofas and the sides of beds. Tables were often round, with tripod legs; in fact, the tripod was a great favorite. There was a great deal of inlay of the favorite emblems but little carving. Plain columns with Doric caps and metal ornaments were used. The change in the use of color was very marked, for deep brown, blue and other dark colors were used instead of the light and gay ones of the previous period. The materials used were usually of solid colors with a design in golden yellow, a wreath, or a torch, or the bee, or one of the other favorite emblems being used in a spot
The bed of Josephine

design, or powdered on. Some of the color combinations in the rooms we read of sound quite alarming.

Since the time of the Empire, France has done as the rest of the world has, gone without any special style.
English Furniture from Gothic Days to the Period of Queen Anne
**English Furniture from Gothic Days to the Period of Queen Anne**

The early history of furniture in all countries is very much the same — there is not any. We know about kings and queens, and war and sudden death, and fortresses and pyramids, but of that which the people used for furniture we know very little. Research has revealed the mention in old manuscripts once in a while of benches and chests, and the Bayeux tapestry and old seals show us that William the Conquerer and Richard Coeur de Lion sat on chairs, even if they were not very promising ones, but at best it is all very vague. It is natural to suppose that the early Saxons had furniture of some kind, for, as the remains of Saxon metalwork show great skill, it is probable they had skill also in woodworking.

In England, as in France, the first pieces of furniture that we can be sure of are chests and benches. They served all purposes apparently, for the family slept on them by night and used them for seats and tables by day. The bedding was kept in the chests, and when traveling had to be done all the family possessions were packed in them. There is an old chest at Stoke d’Abernon church, dating from the thirteenth century, that has a little carving on it, and another
at Brampton church of the twelfth or thirteenth century that has iron decorations. Some chests show great freedom in the carving, St. George and the Dragon and other stories being carved in high relief.

Nearly all the existing specimens of Gothic furniture are ecclesiastical, but there are a few that were evidently for household use. These show distinctly the architectural treatment of design in the furniture. Chairs were not commonly used until the sixteenth century. Our distinguished ancestors decided that one chair in a house was enough, and that was for the master, while his family and friends sat on benches and chests. It is a long step in comfort and manners from the fifteenth to the twentieth century. Later the guest of honor was given the chair, and from that may come the saying that a speaker "takes the chair." Gothic tables were probably supported by trestles, and beds were probably very much like the early sixteenth century beds in general shape. There were cupboards and armoires also, but examples are very rare. From an old historical document we learn that Henry III, in 1288, ordered the sheriff to attend to the painting of the wainscoted chamber in Winchester Castle and to see that "the pictures and histories were the same as before." Another order is for having the wall of the king's chamber at Westminster "painted a good green color in imitation of a curtain." These painted walls and stained glass that we know they had, and the tapestry, must have given a

cheerful color scheme to the houses of the wealthy class even if there was not much comfort.

The history of the great houses of England, and also the smaller manor-houses, is full of interest in connection with the study of furniture. There are many manor-houses that show all the characteristics of the Gothic, Renaissance, Tudor and Jacobean periods, and from them we can learn much of the life of the times. The early ones show absolute simplicity in the arrangement, one large hall for everything, and later a small room or two added. The fire was on the floor and the smoke wandered around until it found its way out at the opening, or louvre, in the roof. Then a chimney was built at the dais end of the hall, and the mantelpiece became an important part of the decoration. The hall was divided by "screens" into smaller rooms, leaving the remainder for retainers, and causing the clergy to inveigh against the new custom of the lord of the manor "eating in secret places." The staircase developed from the early winding stair about a newel or post to the beautiful broad stairs of the Tudor period. These were usually six or seven feet broad, with about six wide easy steps and then a landing, and the carving on the balusters was often very elaborate and sometimes very beautiful—a ladder raised to the nth power.

Slowly the Gothic period died in England and slowly the Renaissance took its place. There was never the gayety of
decorative treatment that we find in France, but the English workmen, while keeping their own individuality, learned a tremendous amount from the Italians who came to the country. Their influence is shown in the Henry VIIth Chapel in Westminster Abbey, and in the old part of Hampton Court Palace, built by Cardinal Wolsey.

The religious troubles between Henry VIII and the Pope and the change of religion helped to drive the Italians from the country, so the Renaissance did not get such a firm foothold in England as it did in France. The mingling of Gothic and Renaissance forms what we call the Tudor period. During the time of Elizabeth all trace of Gothic disappeared, and the influence of the Germans and Flemings who came to the country in great numbers, helped to shorten the influence of the Renaissance. The over-elaboration of the late Tudor time corresponded with the deterioration shown in France in the time of Henry IV. The Hall of Gray's Inn, the Halls of Oxford, the Charterhouse and the Hall of the Middle Temple are all fine examples of the Tudor period.

We find very few names of furniture makers of those days; in fact, there are very few names known in connection with the buildings themselves. The word architect was little used until after the Renaissance. The owner and the "surveyor" were the people responsible, and the plans, directions and details given to the workmen were astonishingly meager.
The great charm that we all feel in the Tudor and Jacobean periods is largely due to the beautiful paneled walls. Their woodwork has a color that only age can give and that no stain can copy. The first panels were longer than the later ones. Wide use was made of the beautiful "linenfold" design in the wainscoting, and there was also much elaborate carving and strapwork. Scenes like the temptation of Adam and Eve were represented, heads in circular medallions, and simply decorative designs were used. In the days of Elizabeth it became the fashion to have the carving at the top of the paneling with plain panels below. Tudor and Jacobean mantelpieces were most elaborate and were of wood, stone, or marble richly carved, to say nothing of the beautiful plaster ones, and there are many fine examples in existence. They were fond of figure decoration, and many subjects were taken from the Bible. The overmantels were decorated with coats-of-arms and other carving, and the entablature over the fireplace often had Latin mottoes. The earliest firebacks date from the fifteenth century. Coats-of-arms and many curious designs were used upon them.

The furniture of the Tudor period was much carved, and was made chiefly of oak. Cornices of beds and cabinets often had the egg-and-dart molding used on them, and the S-curve is often seen opposed on the backs of settees and chairs. It has a suggestion of a dolphin and is reminiscent
of the dolphins of the Renaissance. The beds were very large, the "great bed of Ware" being twelve feet square. The cornice, the bed-head, the pedestals and pillars supporting the cornice were all richly carved. Frequently the pillars at the foot of the bed were not connected with it, but supported the cornice which was longer than the bed. The "Courtney bedstead," dated 1598, showing many of the characteristics of the ornament of the time, is 108½ inches high, 94 inches long, 68 inches wide. The majority of the beds were smaller and lower, however, and the pillars usually rose out of drum-like members, huge acorn-like bulbs that were often so large as to be ugly. They appeared also on other articles of furniture. When in good proportion, with pillars tapering from them, they were very effective, and gradually they grew smaller. Some of the beds had the four apostles, Matthew, Mark, Luke and John, carved on the posts. They were probably the origin of the nursery rhyme:

"Four corners to my bed,
Four angels round my head,
Matthew, Mark, Luke and John,
Bless the bed that I lie on."

Bed hanging were of silk, velvet, damask, wool damask, tapestry, etc., and there were fine linen sheets and blankets and counterpanes of wool work. The chairs were high-

backed, of solid oak with cushions. There were also jointed stools, folding screens, chests, cabinets, tables with carpets (table covers), tapestry hangings, curtains, cushions, silver sconces, etc.

The Jacobean period began with James I, and lasted until the time of William and Mary, or from 1603 to about 1689. In the early part there was still a strong Tudor feeling, and toward the end foreign influence made itself felt until the Dutch under William became paramount. Inigo Jones did his great work at this time in the Palladian style of architecture. His simpler taste did much to reduce the exaggeration of the late Tudor days.

Chests of various kinds still remained of importance. Their growth is interesting: first the plain ones of very early days, then panels appeared, then the pointed arch with its architectural effect, then the low-pointed arch of Tudor and early Jacobean times, and the geometrical ornament. Then came a change in the general shape, a drawer being added at the bottom, and at last it turned into a complete chest of drawers.

Cabinets or cupboards were also used a great deal, and the most interesting are the court- and livery-cupboards. The derivation of the names is a bit obscure, but the court cupboard probably comes from the French court, short. The first ones were high and unwieldy and the later ones were lower with some enclosed shelves. They were used for
a display of plate, much as the modern sideboard is used. The number of shelves was limited by rank; the wife of a baronet could have two, a countess three, a princess four, a queen five. They were beautifully carved, very often, the doors to the enclosed portions having heads, Tudor roses, arches, spindle ornaments and many other designs common to the Tudor and Jacobean periods. They had a silk "carpet" put on the shelves with the fringe hanging over the ends, but not the front, and on this was placed the silver.

The livery-cupboard was used for food, and the word probably comes from the French livrer, to deliver. It had several shelves enclosed by rails, not panels, so the air could circulate, and some of them had open shelves and a drawer for linen. They were used much as we use a serving-table, or as the kitchen dresser was used in old New England days. In them were kept food and drink for people to take to their bedrooms to keep starvation at bay until breakfast.

Drawing-tables were very popular during Jacobean times. They were described as having two ends that were drawn out and supported by sliders, while the center, previously held by them, fell into place by its own weight. Another characteristic table was the gate-legged or thousand-legged table, that was used so much in our own Colonial times. There were also round, oval and square tables which had flaps supported by legs that were drawn out. Tables were almost invariably covered with a table cloth.
Some of the chairs of the time of James I were much like those of Louis XIII, having the short back covered with leather, damask, or tapestry, put on with brass or silver nails and fringe around the edge of the seat. The chief characteristic of the chairs of this time was solidity, with the ornament chiefly on the upper parts, which were molded oftener than carved, with the backs usually high. A plain leather chair called the "Cromwell chair," was imported from Holland. The solid oak back gave way at last to the half solid back, then came the open back with rails, and then the Charles II chair, with its carved or turned uprights, its high back of cane, and an ornamental stretcher like the top of the chair back, between the front legs. This is a very attractive feature, as it serves to give balance of decoration and also partly hides the plain stretcher from sight. A typical detail of Charles II furniture is the crown supported by cherubs or opposed S-curves. James II used a crown and palm leaves.

Grinling Gibbons did his wonderful work in carving at this time, using chiefly pear and lime wood. The greater part of his work was wall decoration, but he made tables, mirrors and other furniture as well. The carving was often in lighter wood than the background, and was in such high relief that portions of it had often to be "pinned" together, for it seemed almost in the round. Evelyn discovered Gibbons in a little shop working away at such a wonderful piece
of carving that he could not rest until he had taken him to Sir Christopher Wrenn. From this introduction came the great amount of work they did together. The influence of his work was still seen in the early eighteenth century.

The room at Knole House that was furnished for James I is of great interest, as it is the same to-day as when first furnished. The bed is said to have cost £8,000. As it is one of the show places of England one should not miss a chance of seeing it.

Until the time of the Restoration the furniture of England could not compare in sumptuousness with that of the Continental countries. England, besides having a simpler point of view, was in a perpetual state of unrest. The honest and hard-working English joiners and carpenters adapted in a plain and often clumsy way the styles of the different foreigners who came to the country. Through it all, however, they kept the touch of national character that makes the furniture so interesting, and they often did work of great beauty and worth. When Charles II came to the throne he brought with him the ideas of France, where he had spent so many years, and the change became very marked. The natural Stuart extravagance also helped to form his taste, and soon we hear of much more elaborate decoration throughout the land.

Many of the country towns were far behind London in the style of furniture, and this explains why some furniture
that is dated 1670, for instance, seems to belong to an earlier
time. The famous silver furniture of Knole House, Seven-
oaks, belongs to this time. Evelyn mentions in his diary that
the rooms of the Duchess of Portsmouth were full of "Japan
cabinets and screens, pendule clocks, greate vases of wrought
plate, tables, stands, chimney furniture, sconces, branches,
baseras, etc., all of massive silver," and later he mentions
again her "massy pieces of plate, whole tables and stands of
incredible value."

In the reign of William and Mary, Dutch influence was
naturally very pronounced, as William disliked everything
English. The English, being now well grounded in the
knowledge of construction, took the Dutch ideas as a founda-
tion and developed them along their own lines, until we
have the late Queen Anne type made by Chippendale.

The change in the style of chairs was most marked and
noticeable. They were more open backed than in Charles's
time and had two uprights and a spoon- or fiddle-shaped
splat to support the sitter's back. The chair backs took
more the curve of the human figure, and the seats were
broader in front than in the back; the cabriole legs were
broad at the top and ended in claw or pad feet, and there
were no straining-rails. The shell was a common form of
ornament, and all crowns and cherubs had disappeared. In-
lay and marquetry came to be generously used, but there
had been many cabinets of Dutch marquetry brought to
England even before the time of William and Mary. Flower designs in dyed woods, shell, mother-of-pearl, and ivory were used.

The marquetry clocks made at this time are wonderful and characteristic examples of the work, and are among the finest clocks ever made for beauty of line and finish, and proportion.

Although marquetry and inlay have much in common there is one great difference between them, and they should not be used as synonymous terms. In marquetry the entire surface of the article is covered with pieces of different colored woods cut very thin and glued on. It is like a modern picture puzzle done with regard to the design. In inlay, the design only is inlaid in the wood, leaving a much larger plain background. Veneering is a thin layer of beautiful and often rare wood glued to a foundation of some cheaper kind. The tall clocks and cabinets of William and Mary's time and the wonderful work of Boulle in France are examples of marquetry, the fine furniture of Hepplewhite and Sheraton are masterly examples of inlay.
Queen Anne
Examples of fine reproductions. The lacquer chairs carry out the true feeling of the old with great skill.
A reproduction of a walnut chair with cane seat and back, of the William and Mary period.
Queen Anne

"QUEEN ANNE" furniture is a very elastic term, for it is often used to cover the reigns of William and Mary, Queen Anne, George I, and a part of the reign of George II, or, in other words, all the time of Dutch influence. The more usual method is to leave out William and Mary, but at best the classification of furniture is more or less arbitrary, for in England, as well as other countries, the different styles overlap each other. Chippendale's early work was distinctly influenced by the Dutch.

Walnut superseded oak in popularity, and after 1720 mahogany gradually became the favorite. There was a good deal of walnut veneering done, and the best logs were saved for the purpose. Marquetry died out and gave place to carving, and the cabriole leg, one of the chief marks of Dutch influence, became a firmly fixed style. The carving was put on the knees and the legs ended in claw and ball and pad feet. Some chairs were simply carved with a shell or leaf or scroll on top rail and knees of the legs. In the more elaborately carved chairs the arms, legs, splat, and top rail were all carved with acanthus leaves, or designs from Gibbons's decoration. Chairs were broad in the seat and high of back with wide
splats, often decorated with inlay, in the early part of the period. The top rail curved into the side uprights, and the seat was set into a rebate or box-seat. The chair backs slowly changed in shape, becoming broader and lower, the splat ceased to be inlaid and was pierced and carved, and the whole chair assumed the shape made so familiar to us by Chippendale.

Tables usually had cabriole legs, although there were some gate- or thousand-legged, tables, and card tables, writing-tables, and flap-tables, were all used. It was in the Queen Anne period that highboys and lowboys made their first appearance.

In the short reign of Anne it also became the fashion to have great displays of Chinese porcelain, and over-mantels, cupboards, shelves and tables were covered with wonderful pieces of it. Addison, in Sir Roger de Coverley, humorously describes a lady's library of the time.

"... And as it was some time before the lady came to me I had an opportunity of turning over a great many of her books, which were ranged in a very beautiful order. At the end of the folios (which were finely bound and gilt), were great jars of china placed one above another in a very noble piece of architecture. The quartos were separated from the octavos by a pile of smaller vessels, which rose in a delightful pyramid. The octavos were bounded by teadishes of all shapes, colors, and sizes, which were so disposed on a wooden frame that they looked like one continued pillar
indented with the finest strokes of sculpture and stained with the greatest variety of dyes. Part of the library was enclosed in a kind of square, consisting of one of the prettiest grotesque works that ever I saw, and made up of scarab-mouches, lions, monkeys, mandarins, trees, shells, and a thousand other odd figures in china ware. In the midst of the room was a little Japan table."

Between 1710 and 1780, lacquer ware became very fashionable, and many experiments were made to imitate the beautiful Oriental articles brought home by Dutch traders. In Holland a fair amount of success was attained and a good deal of lacquered furniture was sent from there to England where the brass and silver mounts were added. English and French were experimenting, the French with the greatest success in their Vernis Martin, mentioned elsewhere, which really stood quite in a class by itself, but the imitations of Chinese and Japanese lacquer were inferior to the originals. Pine, oak, lime, and many other woods, were used as a base, and the fashion was so decided that nearly all kinds of furniture were covered with it. This lacquer ware of William and Mary's and Queen Anne's time must not be confounded with the Japanned furniture of Hepplewhite's and Sheraton's time, which was quite different and of much lower grade.

It was in the reign of Queen Anne that the sun began to rise on English cabinet work; it shone gloriously through the eighteenth century, and sank in early Victorian clouds.
Chippendale and the Eighteenth Century in England
Two important phases of Chippendale's work—an elaborate ribbon-back chair and one of the more staid Gothic type.
An elaborately carved and gilded Chippendale mantel mirror, showing French influence.

One of the most beautiful examples of Chippendale's fretwork tea-tables in existence.
Chippendale and the Eighteenth Century in England

The classification of furniture in England is on a different basis from that of France, as the rulers of England were not such patrons of art as were the French kings. Flemish, Dutch and French influences all helped to form the taste of the people. The Jacobean period lasted from the time of James I to the time of William and Mary. William brought with him from Holland the strong Dutch feeling that had a tremendous influence on the history of English furniture, and during Anne's short reign the Dutch feeling still lasted.

It was not until the early years of the reign of George II that the Georgian period came into its own with Chippendale at its head. Some authorities include William and Mary and Queen Anne in the Georgian period, but the more usual idea is to divide it into several parts, better known as the times of Chippendale, Adam, Hepplewhite and Sheraton. French influence is marked throughout and is divided into parts. The period of Chippendale was contemporaneous with that of Louis XV, and the second part included the other three men and corresponded with the last years of
Louis XV, when the transition to Louis XVI was beginning, and the time of Louis XVI.

It was not until the latter part of Chippendale's life that he gave up his love of rococo curves and scrolls, dripping water effects, and his Chinese and Gothic styles. His early chairs had a Dutch feeling, and it is often only by ornamentation that one can date them.

The top of the Dutch chair had a flowing curve, the splat was first solid and plain, then carved, and later pierced in geometrical designs; then came the curves that were used so much by Chippendale. The carving consisted of swags and pendants of fruit and flowers, shells, acanthus leaves, scrolls, eagle's heads, carved in relief on the surface.

Dutch chairs were usually of walnut and some of the late ones were of mahogany. Mahogany was not used to any extent before 1720, but at that time it began to be imported in large quantities, and its lightness and the ease with which it could be worked made it appropriate for the lighter style of furniture then coming into vogue.

Chippendale began to make chairs with the curved top that is so characteristic of his work. The splat back was always used, in spite of the French, and its treatment is one of the most interesting things in the history of English furniture. It gave scope for great originality. Although, as I have said before, foreign influence was strong, the ideas were adapted and worked out by the great cabinet-makers
of the Georgian period with a vigor and beauty that made a distinct English style, and often went far, far ahead of the originals.

There were, so far as we know, three Thomas Chippen- dales: the second was the great one. He was born in Wor- cester, England, about 1710, and died in 1779. He and his father, who was also a carver, came to London before 1727. Very little is known about his life, but we may feel sure he was that rare combination: a man of genius with decided business ability. He not only designed the furniture which was made in his shop, but executed a large part of it also, and superintended all the work done there by others. That he was a man of originality shows distinctly through his work, for although he adapted and copied freely and was strongly influenced by the Dutch, French, and "Chinese taste," there is always his own distinctive touch. The furniture of his best period, and those belonging to his school, has great beauty of line and proportion, and the exquisite carving shows a true feeling for ornament in relation to plain sur- faces. There are a few examples in existence of carving in almost as high relief as that of Grinling Gibbons, swags, etc., and in his most rococo period his carving was very elabo- rate. It always had great clearness of edge and cut, and a wonderful feeling for light and shade. In what is called "Irish Chippendale," which was furniture made in Ireland after the style of Chippendale, the carving was in low relief
and the edges fairly smoothed off, which made it much less interesting.

Chippendale looked upon his work as one of the arts and placed his ideal of achievement very high, and that he received the recognition of the best people of the time as an artist of merit is proved by his election to the Society of Arts with such men as Sir Joshua Reynolds, Horace Walpole, Samuel Johnson, David Garrick, and others.

The genius of Chippendale justly puts him in the front rank of cabinet-makers and his influence was the foundation of much of the fine work done by many others during the eighteenth century. He is often criticized for his excessive rococo taste as displayed in the plates of the "Gentleman's and Cabinet-maker's Director," and in some of his finished work. Many of the designs in the "Director" were probably never carried out, and some of them were probably added to by the soaring imaginations of the engraver. This is true of all the books published by the great cabinet-makers, and it always seems more fair to have their reputations rest on their finished work which has come down to us.

Chippendale, of course, must bear the chief part of the charge of over-elaboration, and he frankly says that he thinks "much enrichment is necessary." He copied Meissonier's designs and had a great love for gilding, but the display of rococo taste is not in all his work by any means, nor was it so excessive as that of the French. The more self-restrained
The dripping-water effect, of which Chippendale was so fond at one time, is plainly shown on the doors of this particularly fine example of his work.
A chair from early in the 18th century of the Dutch type

One of the Chippendale patterns, dating from about 1750

Hepplewhite's characteristic shield-shaped back

Thomas Sheraton's rectangular type of chair-back
temperament of the Anglo-Saxon race makes a deal of difference. He early used the ogee curve and cabriole leg, the knees of which he carved with cartouches and leaves or other designs. The front rail of the chair also was often carved. There were several styles of curved leg, the cabriole leg of Dutch influence, and the curved style of Louis XV. There were also several variations on the claw and ball foot. Many Chippendale chairs were without stretchers, but the straight legged style usually had four. The seats were sometimes in a box frame or rebate, and sometimes the covering was drawn over the frame and fastened with brass headed nails. Chippendale in the "Director" speaks of red morocco, Spanish leather, damask, tapestry and other needlework as being appropriate for the covering of his chairs.

In about 1760 or 1765 he began to use the straight leg for his chairs. The different shapes of splats will often help in deciding the dates of their making, and its development is of great interest. The curves shown in the diagram on page 84 are the merest suggestions of the outline of the splat, and they were carved most beautifully in many different designs. Ribbon-back chairs are dated about 1755 and show the adapted French influence. His Gothic and Chinese designs were made about 1760-1770. Ladder-back chairs nearly always had straight legs, either plain or with double ogee curve and bead moldings, but there are a few examples of ladder-back and cabriole legs combined, although these
are very rare. The chair settees of the Dutch time, with backs having the appearance of chairs side by side, were also made by Chippendale. “Love seats” were small settees. It was naïvely said that “they were too large for one and too small for two.” A large armchair that shows a decided difference in the manners of the early eighteenth century and the present day was called the “drunkard’s chair.”

When the craze for “Indian work” was at its height, there were many pieces of old oak and walnut furniture covered with lacquer to bring it up to the fashionable standard, but their forms were not suitable, and oak especially, with its
coarse grain did not lend itself to the process. The stands for lacquer cabinets vary in style, but were often gilded in late Louis XIV and Louis XV style. The difference between true lacquer and its imitations is hard to explain. The true was made by repeated coats of a special varnish, each rubbed down and allowed to become hard before the next was put on. This gave a hard, cool, smooth surface with no stickiness. Modern work, done with paint and French varnish, has not this delightful feeling, but is nearly always clammy to the touch, and the colors are hurt by the process of polishing. Chippendale did not use much lacquer, but in the "Director" he often says such and such designs would be suitable for it.

Much of the furniture that Chippendale made was heavy, but the best of it had much beauty. His delicate fretwork tea-tables are a delight, with their fretwork cupboards and carving. He seemed to combine many sides in his artistic temperament, a fact that many people lay to his power of assimilating the work of others. He did not make sideboards in our sense of the word. His were large side-tables, sometimes with a drawer for silver and sometimes not. Pier-tables were very much like them in shape, but smaller, and were often gilded to match the mirrors which were placed above them.

The larger pieces of Chippendale furniture have the same characteristic of perfect workmanship and detail which the
chairs possess. Dining-tables were made in sections consisting of two semi-circular ends and two center pieces with flaps which could all be joined together and make a very large table. The beds he made had four posts and cornice tops elaborately carved and often gilded, with a strong Louis XV feeling. The curtains hung from the inside of the cornice. He also made many other styles of beds, such as canopy beds, tent beds, flat tester beds, Chinese beds, Gothic beds: there was almost nothing he did not make for the house from wall brackets to the largest wardrobes.

To many people used to the simple Chippendale furniture which is commonly seen, the idea of rich and beautiful carving and gilding comes as a surprise, and even in the "Director" there are no plates which show his most beautiful work. His elaborate furniture was naturally chiefly order work, and so was not pictured, and much of it that is left is still in the possession of the descendants of the original owners. The small number of authentic pieces which have reached public sales have been eagerly snapped up by private collectors and museums at large prices.

In America much of the furniture called Chippendale was not made by Chippendale himself, but was made after his designs and copied from imported pieces by clever cabinet-makers here in the, then, colonies. The average American of the eighteenth century was a simple and not over rich person of good breeding and refined taste who appreciated the
It is interesting to compare the generous curves of the Chippendale sofa with the greater severity of Hepplewhite's taste.
A valuable collection of an Adam mirror, a block-front, knee-hole chest of drawers, and a Hepplewhite chair
fact that the elaborate furniture of England and France would not be in keeping with life in America, and so either imported the simpler kinds, or demanded that the home cabinet-maker choose good models for his work. This partly explains why we have so much really good Colonial furniture, and not so much of the elaborately carved and gilded variety.
Robert Adam
Robert Adam

Robert Adam was the second of the four sons of William Adam, and was born in 1728. The Adam family was Scotch of good social position. Robert early showed a talent for drawing. He was ambitious, and, as old Roman architecture interested him above all other subjects, he decided that he could attain his ideals only by study and travel in Italy. He returned to England in 1758 after four years of hard work with the results of his labors, the chief treasure being his careful drawings of Diocletian’s villa. His classical taste was firmly established, and was to be one of the important influences of the eighteenth century.

Robert and James Adam went into partnership and became the most noted architects of their day in England. The list of their buildings is long and interesting, and much of their architectural and decorative work is still in existence.

To many people it will seem like putting the cart before the horse to say that Robert Adam had in any way influenced the style we call Louis XVI, but it is a plausible theory and certainly an interesting one. Mr. G. Owen Wheeler in his interesting book on “Old English Furniture” makes a strong case in favor of the Adam Brothers. Classical taste
was well established in England by 1765, before the transition from Louis XV to Louis XVI began, and Robert Adam published his book in parallel columns of French and English, which shows it must have been in some demand in France. The great influence of the excavations at Pompeii must naturally not be underestimated, as it was far reaching, but with the beautiful Adam style well developed, just across the Channel, it seems probable that it may have had its share in forming French taste. The foundation being there, the French put their characteristic touch to it and developed a much richer style than that of the Adam Brothers, but the two have so much in common that Louis XVI furniture may be put into an Adam room with perfect fitness, and vice versa. As the Adams cared only to design furniture some one else had to carry out the designs, and Chippendale was master carver and cabinet-maker under them at Harewood House, Yorkshire, and probably was also in many other instances.

The early furniture of Adam was plain, and the walls were treated with much decoration that was classic in feeling. He possessed the secret of a composition of which his exquisite decorations on walls and ceilings were made. After 1770 he simplified his walls and elaborated his furniture designs until they met in a beautiful and graceful harmony. He designed furniture to suit the room it was in, and with the dainty and charming coloring, the beauty of proportion
A mantel of marble and steel in the drawing-room, Rushton Hall, Northamptonshire—the work of the brothers Adam

Another Adam mantel. It is interesting to note how clearly these mantels are the inspiration of our own Colonial work
The delicacy of the painting and the graceful proportions of these reproductions are in the true spirit of Adam.
and the charm of the wall decoration, the scheme had great beauty.

He used the ram's head, wreaths, honeysuckle, mythological subjects, lozenge-shaped, oval and octagonal panels, and many other designs. He was one of the first to use the French idea of decorating furniture with painting and porcelain plaques, and the furniture itself was simple and beautiful in line. The stucco ceilings designed by the brothers were picked out with delicate colors and have much beauty of line.

A great deal of the most beautiful Adam decoration was the painting on walls and ceilings and furniture by Angelica Kaufmann, Zucchi, Pergolesi, Cipriani, and Columbani. The standard of work was so high that only the best was satisfactory.

Adam usually designed his furniture for the room in which it was to stand, and he often planned the house and all its contents, even to the table silver, to say nothing of the doorlocks. The chairs were of mahogany, or painted, or gilded, wood. Some had oval upholstered backs, with the covering specially designed for the room, and some had lyre backs, later used so much by Sheraton, and others had small painted panels placed in the top rail, with beautiful carving. Mirrors were among the most charming articles designed by Adam, and had composition wreaths and cupids and medallions for ornament. They were usually made in pairs in
both large and small sizes. A pair of antique mirrors should be kept together, as they are very much more valuable than when separated.

Adam was one of the first to assemble the pieces that later grew into the sideboard — a table, two pedestals, and a cellaret. There is a sideboard designed by him for Gillows, in which the parts are connected, and it is at least one of the ancestors of the beautiful Shearer and Hepplewhite ones and our modern useful, though not always beautiful, article. When, late in his career, Adam attempted to copy the French, he was not so successful, as he did not have their flexibility of temperament, and was unable to give the warmer touch to the classic, which they did so well. His paneled walls, however, have great dignity and purity of line and feeling, and the applied ornament was really an ornament, and not a disfigurement as too often happens in our day. With Adam one feels the surety of knowledge and the refinement of good taste led by a high ideal.
Hepplewhite
There are many details worthy of notice in this room—the mahogany doors, the glass globes and crystal drops of the chandelier, and the knife-boxes on the sideboard.
A fine old Hepplewhite sideboard, with old glass and silver, but the modern wallpaper is not in harmony.

Hepplewhite

The work of Hepplewhite and his school lasted from about 1760 to 1795; the last nine years of the time the business was carried on by his widow, Alice, under the name of A. Hepplewhite & Co. For five years after that some work was done after his manner, but it was distinctly inferior. In the early seventies Hepplewhite's work was so well known and so much admired that its influence was shown in the work of his contemporaries. There was a great difference between his style and that of Chippendale, his being much lighter in construction and effect, besides the many differences of design. Hepplewhite was strongly influenced by the French style of Louis XVI, and also the pure taste of Robert Adam at its height. Hepplewhite, however, like all the great cabinet-makers, both French and English, was a great genius himself and stamped the impress of his own personality upon his work.

Many people date Hepplewhite's fame from the time of the publication of his book, "The Cabinet Maker and Upholsterer's Guide," in 1788, not realizing that he had been dead for two years when it appeared. Its publication was justified by the well established popularity of his furniture and the success with which his designs were carried out by A. Hepplewhite & Co.
It is interesting to notice the difference in the size of chairs which became apparent during Hepplewhite's time. Hoop-skirts and stiffened coats went out of fashion, and with them went the need of large chair seats. The transition chairs made by Hepplewhite were not very attractive in proportion, as the backs were too low for the width. The transition from Chippendale to Hepplewhite was not sudden, as the last style of Chippendale was simpler and had more of the classic feeling in it. Hepplewhite says, in the preface to his book: "To unite elegance and utility, and blend the useful with the agreeable, has ever been considered a difficult, but an honorable task." He sometimes failed and sometimes succeeded. His knowledge of construction enabled him to make his chairs with shield, oval, and heart-shaped backs. The tops were slightly curved, also the tops of the splats, and at the lower edge where the back and the splat join, a half rosette was carved. He often used the three feathers of the Prince of Wales, sheaves of wheat, anthemion, urns, and festoons of drapery, all beautifully carved, and forming the splat. The backs of his chairs were supported at the sides by uprights running into the shield-shaped back and did not touch the seat frame in any other way. With this apparent weakness of construction it is wonderful how many of his chairs have come down to us in perfect condition, but it was his knowledge of combining lightness with strength which made it possible.

Hepplewhite used straight or tapering legs with spade feet
for his furniture, often inlaid with bellflowers in satinwood. The legs were sometimes carved with a double ogee curve and bead molding. He did not use carving in the lavish manner of Chippendale, but it was always beautifully done, and he used a great deal of inlay of satinwood, etc., oval panels, lines, urns, and many other motives common to the other cabinet-makers of the day, and also painted some of his furniture. His Japan work was inferior in every way to that of the early part of the eighteenth century. The upholstery was fastened to the chairs with brass-headed tacks, often in a festoon pattern. Oval-shaped brass handles were used on his bureaus, desks, and other furniture. He made many sideboards, some, in fact, going back to the side table and pedestal idea, and bottle-cases and knife-boxes were put on the ends of the sideboards. His regular sideboards were founded on Shearer's design.

Shearer's furniture was simple and dainty in design, and he has the honor of making the first real serpentine sideboard, about 1780, which was not a more or less disconnected collection of tables and pedestals. It was the forerunner of the Hepplewhite and Sheraton sideboards that we know so well. Shearer is now hardly known even by name to the general world, but without doubt his ideal of lightness and strength in construction had a good deal of influence on his contemporaries and followers.

Hepplewhite was very fond of oval and semi-circular
shapes, and many of his tables are made in either one way or the other. His sideboards, founded on Shearer's designs, are very elegant, as he liked to say, in their simplicity of line, their inlay, and their general beauty of wood. He was most successful in his chairs, sideboards, tables, and small household articles, for his larger pieces of furniture were often too heavy. Some of the worst, however, were made by other cabinet-makers after his designs, and not by Hepplewhite himself.
Sheraton
Sheraton

THOMAS SHERATON was born in 1750, and was a journeyman cabinet-maker when he went to London. His great genius for furniture design was combined with a love of writing tracts and sermons. Unfortunately for his success in life, he had a most disagreeable personality, being conceited, jealous, and perfectly willing to pour scorn on his brother cabinet-makers. This impression he quite frankly gives about himself in his books. The name of Robert Adam is not mentioned, and this seems particularly unpleasant when one thinks of the latter's undoubted influence on Sheraton's work. Sheraton's unfortunate disposition probably helped to make his life a failure.

It is very sad to see such possibilities as his not reaping their true reward, for poverty dogged his steps all through life, and he was always struggling for a bare livelihood. His books were not financially successful, and at last he gave up his workshop and ceased to make the furniture he designed. He was an expert draughtsman and his designs were carried out by the skillful cabinet-makers of the day. Adam Black gives a very pitiful account of the poverty in which Sheraton lived, and says: "That by attempting to do everything he does nothing." His "nothing," however, has proved a very
big something in the years which have followed, for Sheraton is responsible for one of the most beautiful types of furniture the world has known, and although his life was hard and bitter, his fame is great.

Sheraton took the style of Louis XVI as his standard, and some of his best work is quite equal to that of the French workmen. He felt the lack of the exquisite brass and ormulu work done in France, and said if it were only possible to get as fine in England, the superior cabinet-making of the English would put them far ahead in the ranks. To many of us this loss is not so great, for the beauty of the wood counts for more, and is not detracted from by an oversupply of metal ornament, as sometimes happened in France. "Enough is as good as a feast." Sheraton, at his best, had beauty, grace, and refinement of line without weakness, lightness and yet perfect construction, combined with balance, and the ornament just sufficient to enhance the beauty of the article without overpowering it. It is this fine work which the world remembers and which gave him his fame, and so it is far better to forget his later period when nearly all trace of his former greatness was lost.

Sheraton profited by the work of Chippendale, Adam, and Hepplewhite, for these great men blazed the trail for him, so to speak, in raising the art of cabinet-making to so high a plane that England was full of skilled workmen. The influence of Adam, Shearer, and Hepplewhite, was very great
A Sheraton bureau with a delightful little dressing-glass

A sewing-table having the spirit of both Hepplewhite and Sheraton.
on his work, and it is often difficult to tell whether he or Hepplewhite or Shearer made some pieces. He evidently did not have business ability and his bitter nature hampered him at every turn. The Sheraton school lasted from about 1790 to 1806. He died in 1806, fairly worn out with his struggle for existence. Poor Sheraton, it certainly is a pitiful story.

Sheraton's chair backs are rectangular in type, with urn splats, and splats divided into seven radiates, and also many other designs. The chairs were made of mahogany and satinwood, some carved, some inlaid, and some painted. The splat never ran into the seat, but was supported on a cross rail running from side to side a few inches above the seat. The material used for upholstery was nailed over the frame with brass-headed tacks.

Bookcases were of mahogany and satinwood veneer, and the large ones were often in three sections, the center section standing farther out than the two sides. The glass was covered with a graceful design in moldings, and the pediments were of various shapes, the swan-neck being a favorite.

Sideboards were built on very much the lines of those made by Shearer and Hepplewhite. There were drawers and cupboards for various uses. The knife-boxes to put on the top came in sets of two, and sometimes there was a third box. The legs were light and tapering with inlay of satinwood, and sometimes they were reeded. There was inlay also on the doors and drawers. There were also sideboards without
inlay. The legs for his furniture were at first plain, and then tapering and reeded. He used some carving, and a great deal of satinwood and tulip-wood were inlaid in the mahogany; he also used rosewood. The bellflower, urn, festoons, and acanthus were all favorites of his for decoration.

He made some elaborate and startling designs for beds, but the best known ones are charming with slender turned posts or reeded posts, and often the plain ones were made of painted satinwood.

The satinwood from the East Indies was fine and of a beautiful yellow color, while that from the West Indies was coarser in grain and darker in color. It is a slow growing tree, and that used nowadays cannot compare with the old, in spite of the gallant efforts of the hard working fakirs to copy its beautiful golden tone.

All the cabinet-makers of the eighteenth century made ingenious contrivances in the way of furniture, washstands concealed in what appear to be corner cupboards, a table that looks as simple as a table possibly can, but has a small step-ladder and book rest hidden away in its useful inside, and many others. Sheraton was especially clever in making these conveniences, as these two examples show, and his books have many others pictured in them. Sheraton’s list of articles of furniture is long, for he made almost everything from knife-boxes to “chamber-horses,” which were
contrivances of a saddle and springs for people to take exercise upon at home.

Sheraton's "Drawing Book" was the best of those he published. It was sold chiefly to other cabinet-makers and did not bring in many orders, as Chippendale's and Hepplewhite's did. His other books showed his decline, and his "Encyclopedia," on which he was working at the time of his death, had many subjects in it beside furniture and cabinet-making. His sideboards, card-tables, sewing-tables, tables of every kind, chairs — in fact, everything he made during his best period — have a sureness and beauty of line that makes it doubly sad that through the stress of circumstances he should have deserted it for the style of the Empire that was then the fashion in France. One or two of his Empire designs have beauty, but most of them are too dreadful, but it was the beginning of the end, and the eighteenth century saw the beautiful principles of the eighteenth century lost in a bog of ugliness.

There were many other cabinet-makers of merit that space does not allow me to mention, but the great four who stood head and shoulders above them all were Chippendale, Adam, Hepplewhite and Sheraton. They, being human, did much work that is best forgotten, but the heights to which they all rose have set a standard for English furniture in beauty and construction that it would be well to keep in mind.

The nineteenth century passed away without any especial
genius, and in fact, with a very black mark against its name in the hideous early Victorian era. The twentieth century is moving along without anything we can really call a beautiful and worthy style being born. There are many working their way towards it, but there is apt to be too much of the bizarre in the attempts to make them satisfactory, and so we turn to the past for our models and are thankful for the legacy of beauty it has left to the world.
A General Talk
A General Talk

WHEN one faces the momentous question of furnishing a house, there are numerous things which must be looked into and thoroughly understood if success is to be assured. If one is building in the country the first question is the placing of the house in regard to the view, but in town there is not much choice. The architect being chosen with due regard to the style of house one wishes, the planning can go merrily on. The architect should be told if there are any especially large and beautiful pieces of furniture or tapestry to be planned for, so they shall receive their rightful setting. After all, architects are but human, and cannot tell by intuition what furniture is in storage.

It is sad to see how often architecture and decoration are looked upon as two entirely disconnected subjects, instead of being closely allied, playing into each other’s hands, as it were, to make a perfect whole. To many people, a room is simply a room to be treated as they wish; whereas many rooms are absolute laws unto themselves, and demand a certain kind of treatment, or disaster follows. In America this kind of house is not found so often as in Europe, but the number is growing rapidly as architects and their clients realize more
and more the beauties and possibilities of the great periods as applied to the modern house. It is only to the well-trained architect and decorator with correct taste that one may safely turn, for the ill-trained and commonplace still continue to make their astounding errors, and so to have the decoration of a room truly successful one must begin with the architect, for he knows the correct proportions of the different styles and appreciates their importance. He will plan the rooms so that they, when decorated, may complete his work and form a beautiful and convincing whole. This will give the restfulness and beauty that absolute appropriateness always lends.

This matter of appropriateness must not be overlooked, and the whole house should express the spirit of the owner; it should be in absolute keeping with his circumstances. There are few houses which naturally demand the treatment of palaces, but there are many which correspond with the smaller chateaux of France and the manor-houses of England. It is to these we must turn for our inspiration, for they have the beauty of good taste and high standards without the lavishness of royalty; but even royalty did not always live in rooms of state, for at Versailles, and Petit Trianon, there is much simple exquisite furniture. The wonderful and elaborate furniture of the past must be studied of course, but to the majority of people, then as now, the simpler expression of its fundamental lines of beauty are more
Wilson Eyre, architect

A fresh and charming dining-room in a simple country house
The sweep of the stairs, with the fine ironwork and rich colored tapestries, a Gobelin of Apollo, and a Flemish tapestry of the Crucifixion, make an imposing hall. An old Spanish chair is on the landing, and the clock with Father Time upon it is an especially fine example of Beulle's work.
satisfactory. The trouble with many houses is that their furnish-
ing are copied from too grand models, and the effect in an average modern house is unsuitable in every way. They cannot give the large vistas and appropriate background in color and proportion which are necessary. Beauty does not depend upon magnificence.

If one has to live in a house planned and built by others one often has to give up some long cherished scheme and adopt something else more suited to the surroundings. For instance, the rooms of the great French periods were high, and often the modern house has very low ceilings, that would not allow space for the cornice, over-doors and correctly proportioned paneling, that are marked features of those times. Mrs. Wharton has aptly said: "Proportion is the good breeding of architecture," and one might add that proportion is good breeding itself. One little slip from the narrow path into false proportion in line or color or mass and the perfection of effect is gone.

Proportion is another word for the fitness of things, and that little phrase, "the fitness of things," is what Alice in Wonderland calls a "portmanteau" phrase, for it holds so much, and one must feel it strongly to escape the pitfalls of period furnishing. Most amazing things are done with perfect complacency, but although the French and English kings who gave their names to the various periods were far from models of virtue, they certainly deserved no such cruel
punishment as to have some of the modern rooms, such as we have all seen, called after them.

The best decorators refuse to mix styles in one room and they thus save people from many mistakes, but a decorator without a thorough understanding of the subject, often leads one to disaster. A case in point is an apartment where a small Louis XV room opens on a narrow hall of nondescript modern style, with a wide archway opening into a Mission dining-room. As one sits in the midst of pink brocade and gilding and looks across to the dining-room, fitted out in all the heavy paraphernalia of Mission furniture, one's head fairly reels. No contrast could be more marked or more unsuitable, and yet this is by no means an uncommon case.

If one intends to adopt a style in decorating one's house, there should be a uniformity of treatment in all connecting rooms, and there must be harmony in the furniture and architecture and ornament, as well as harmony in the color scheme. The foundation must be right before the decoration is added. The proportion of doors and windows, for instance, is very important, with the decorated over-door reaching to the ceiling. The over-doors and mantels were architectural features of the rooms, and it was not until wall-papers came into common use, in the early part of the nineteenth century, that these decorative features slowly died out.

The mantel and fireplace should be a center of interest and should be balanced with something of importance on the other
side of the room, either architectural or decorative. It was this regard for symmetry, balance, proportion, and harmony, which made the old rooms so satisfying; there was no magic about it, it was artistic common sense.

The use for which a room is intended must be kept in view and carried out with real understanding of its needs. The individuality of the owner is of course a factor. Unfortunately the word individuality is often confounded with eccentricity and to many people it means putting perfectly worthy and unassuming articles to startling uses. By individuality one should really mean the best expression of one's sense of beauty and the fitness of things, and when it is guided by the laws of harmony and proportion the result is usually one of great charm, convenience, and comfort. These qualities must be in every successful house.

In furnishing any house, whether in some special period or not, there are certain things which must be taken into account. One of these is the general color scheme. Arranging a color scheme for a house is not such a difficult matter as many people suppose, nor is it the simple thing that many others seem to think. There is a happy land between the two extremes, and the guide posts pointing to it are a good color sense, a true feeling for the proportion and harmony of color, and an understanding of the laws of light. The trouble is that people often do not use their eyes; red is red to them, blue is blue, and green is green. They have never appeared
to notice that there are dozens of tones in these colors. Nature is one of the greatest teachers of color harmony if we would but learn from her. Look at a salt marsh on an autumn day and notice the wonderful browns and yellows and golds in it, the reds and russets and touches of green in the woods on its edge, and the clear blue sky over all with the reflections in the little pools. It is a picture of such splendor of color that one fairly gasps. Then look at the same marsh under gray skies and see the change; there is just as much beauty as before, the same russets and golds and reds, but exquisitely softened. One is sparkling, gay, a harmony of brilliancy; the other is more gentle, sweet and appealing, a harmony of softened glory.

Again, Nature makes a thousand and one shades of green leaves to harmonize with her flowers; the yellow green of the golden rod, the silver green of the milkweed, the bright green of the nasturtium. Notice the woods in wintertime with the wonderful purple browns and grays of the tree trunks and branches, the bronze and russet of the dead leaves, and the deep shadows in the snow. Everywhere one turns there are lessons to learn if one will only use seeing eyes and a thinking mind.

A house should be looked at as a whole, not as so many units to be treated in a care-free manner. A room is affected by all the rooms opening from it, as they, in turn, are affected by it. There can be variety of color with harmony of
contrast, or there can be the same color used throughout, with the variety gained by the use of its different tones. The plan of each floor should be carefully studied to get the vistas in all directions so that harmony may reign and there will be no danger of a clashing color discord when a door is opened. The connecting rooms need not be all in one color, of course, but they should form a perfect color harmony one with another, with deft touches of contrast to accent and bring out the beauty of the whole scheme: This matter of harmony in contrast is an important one. The idea of using a predominant color is a restful one, and adds dignity and apparent size to a house. The walls, for instance, could be paneled in white enameled wood, or plaster, and the necessary color and variety could be supplied by the rugs, hangings, furniture, and pictures.

Another charming plan is to have different tones of one color used—a scheme running from cream or old ivory through soft yellow and tan to a russet brown would be lovely, especially if the house did not have an over supply of light. Greens may be used with discretion, and a cool and attractive scheme is from white to soft blue through gray. If different colors are to be used in the different rooms the number of combinations is almost unlimited, but there must always be the restraining influence of a good color sense in forming the scheme or the result will be disappointing, to say the least.
A very important matter in the use of color is in its relation to the amount and quality of the light. Dreary rooms can be made cheerful, and too bright and dazzling rooms can be softened in effect, by the skillful use of color. The warm colors,—cream white, yellows—but not lemon yellow—orange, warm tans, russet, pinks, yellow greens, yellowish reds are to be used on the north or shady side of the house. The cool colors,—white, cream white, blues, grays, greens, and violet, are for the sunny side. Endless combinations may be made of these colors, and if a gray room, for example, is wished on the north side of the house, it can be used by first choosing a warm tone of gray and combining with it one of the warm colors, such as certain shades of soft pink or yellow. We can stand more brilliancy of color out-of-doors than we can in the house, where it is shut in with us. It is too exciting and we become restless and nervous. No matter on what scale a house is furnished one of its aims should be to be restful.

There is one great mistake which many people make of thinking of red as a cheerful color, and one which is good to use in a dark room. The average red used in large quantities absorbs the light in a most disheartening manner, making a room seem smaller than it really is; it makes ugly gloomy shadows in the corners, for at night it seems to turn to a dingy black, and increases the electric light bill. Red is also a severe strain on the eyes, and many a red living-room
is the cause of seemingly unaccountable headaches. I do not mean to say that red should never be used, for it is often a very necessary color, but it must be used with the greatest discretion, and one must remember that a little of it goes a long way. A room, for instance, paneled with oak, with an oriental rug with soft red in it, red hangings, and a touch of red in an old stained glass panel in the window, and red velvet cushions on the window seat, would have much more warmth and charm than if the walls were covered entirely with red. One red cushion is often enough to give the required note. The effect of color is very strong upon people, although a great many do not realize it, but nearly everyone will remember a sudden and apparently unexplained change of mood in going into some room. One can learn a deal by analyzing one's own sensations. Figured wall-papers should also be chosen with the greatest care for this same reason. Papers which have perpetual motion in their design, or eyes which seem to peer, or an unstable pattern of gold running over it, must all be ignored. People who choose this kind of paper are blest, or cursed, whichever way one looks at it, by an utter lack of imagination.

A room is divided into three parts, the floor, the walls, and the ceiling, and the color of the room naturally follows the law of nature; the heaviest or darkest at the bottom, or floor; the medium tone in the center, or walls; and the lightest at the top, or ceiling. It is only when one has to artifi-
cially correct the architectural proportions of a room that the ceiling should be as dark, or darker, than the walls. A ceiling can also be seemingly lowered by bringing the ceiling color down on the side walls. A low room should never have a dark ceiling, as it makes the room seem lower.

Walls should be treated as a background or as a decoration in themselves. In the latter case any pictures should be set in specially arranged panels and should be pictures of importance, or fresco painting. The walls of the great periods were of this decorative order. They were treated architecturally and the feeling of absolute support which they gave was most satisfactory. The pilasters ran from base or dado to the cornice and the over-doors made the doors a dignified part of the scheme, rather than mere useful holes in the wall as they too often are nowadays.

Paneling is one of the most beautiful methods of wall decoration. There are many styles of paneling, stone, marble, stucco, plaster, and wood, and each period has its own distinctive way of using them, and should be the correct type for the style chosen. The paneling of a Tudor room is quite different from a Louis XVI room. In the course of a long period like that of Louis XV the paneling slowly changed its character and the rococo style was followed by the more dignified one that later became the style of Louis XVI.

Tapestry and paintings of importance should have panels especially planned for them. If one does not wish to have
the paneling cover the entire wall, a wainscot or dado with
the wall above it covered with tapestry, silk, painting, or
paper, will make a beautiful and appropriate room for many
of the different styles of furniture. A wainscot should not
be too high; about thirty-six inches is a good height, but
should form a background for the chairs, sofas, and tables,
placed around the room.

A wainscot six or more feet high is not as architecturally
correct as a lower one, because a wall is, in a way, like an
order in its divisions, and if the base, or wainscot, is too high
it does not allow the wall, which corresponds to the column,
to have its fair proportion. This feeling is very strong in
many apartment houses where small rooms are overburdened
by this kind of wainscot, and to make matters worse, the
top is used as a plate-rail. A high wainscot should be used
only in a large room, and if there are pilasters arranged to
connect it with the cornice, and the wall covering is put on
in panel effect between, the result is much better than if the
wall were left plain, as it seems to give more of a raison
d'être.

Tapestry is another of the beautiful and important wall
coverings, and the happy possessor of Flemish or Gobelin,
or Beauvais, tapestries, is indeed to be envied. A rare old
tapestry should be paneled or hung so it will serve as a back-
ground. Used as portieres, tapestry does not show the
full beauty of its wonderful time-worn colors and its fasci-
nation of texture. It is not everyone, however, who is able to own these almost priceless treasures of the past, and so modern machinery has been called to the aid of those who wish to cover their walls and furniture with tapestry. Many of these modern manufactures are really beautiful, thick in texture, soft in color, and often have the little imperfections and unevennesses of hand weaving reproduced, so that we feel the charm of the old in the new. Many do not realize that in New York there are looms making wonderful hand-woven tapestries with the true decorative feeling of the best days of the past. On the top floor of a large modern building stand the looms of various sizes, the dyeing tubs, the dripping skeins of wool and silk, the spindles and bobbins, and the weavers hard at work carrying out the beautiful designs of the artist owner. There are few colors used, as in mediæval days, but wonderful effects are produced by a method of winding the threads together which gives a vibrating quality to the color. When the warp in some of the coarser fabrics is not entirely covered it is sometimes dyed, which gives an indescribable charm. Tapestries of all sizes have been made on these looms, from the important decoration of a great hall, to sofa and chair coverings. Special rugs are also made. It is a pleasure to think that an art which many considered dead is being practiced with the highest artistic aim and knowledge and skill in the midst of our modern rush. This hand-woven tapestry is made to fit spe-
cial spaces and rooms, and there is nothing more beautiful and suitable for rooms of importance to be found in all the long list of possibilities.

The effect of modern tapestry, like the old, is enhanced if the walls are planned to receive it, for it was never intended to be used as wall-paper. It is sometimes used as a free hanging frieze, so to speak, and sometimes a great piece of it is hung flat against the wall, but as a general thing to panel it is the better way.

Another beautiful wall covering is leather. It should be used much more than it is, and is especially well adapted for halls, libraries, dining-rooms, smoking- and billiard-rooms, and dens. Its wonderful possibilities for rooms which are to be furnished in a dignified and beautiful manner are unsurpassed. It may be used in connection with paneling or cover the wall above a wainscot.

Fresco painting is another of the noble army of wall treatments which lends itself beautifully to all kinds and styles of rooms.

Amidst all the grandeur of tapestry and painting one must not lose sight of the simpler methods, for they are not to be distained. Wall-papers are growing more and more beautiful in color, design, and texture, and one can find among them papers suited to all needs. Fabrics of all kinds have become possibilities since their dust-collecting capacity is now no longer a source of terror, as vacuum cleaners
are one of the commonplaces of existence. Painting or tinting the walls, when done correctly, is very satisfactory in many rooms.

There is no doubt that in many houses are wonderful collections of furniture, tapestries and treasures of many kinds, that are placed without regard to the absolute harmony of period, although the general feeling of French or Italian or English is kept. They are usually great houses where the sense of space keeps one from feeling discrepancies that would be too marked in a smaller one, and the interest and beauty of the rare originals against the old tapestries have an atmosphere all their own that no modern reproduction can have. There are few of us, however, who can live in this semi-museum kind of house, and so one would better stick to the highway of good usage, or there is danger of making the house look like an antique shop.

To carry out a style perfectly, all the small details should be attended to — the door-locks, the framework of the doors and windows, the carving. All these must be taken into account if one wishes success. It is better not to attempt a style throughout if it is to be a makeshift affair and show the effects of inadequate knowledge. The elaborate side of any style carried out to the last detail is really only possible and also only appropriate for those who have houses to correspond, but one can choose the simpler side and have beautiful and charming rooms that are perfectly suited to the
All the glory of heraldry makes this tapestry rich in color.

A very rare and beautiful Flemish tapestry of the late 15th century.
average home. For instance, if one does not wish elaborate gilded Louis XVI furniture, upholstered in brocade, one can choose beautiful cane furniture of the time and have it either in the natural French walnut or enameled a soft gray or white to match the woodwork, with cushion of cretonne or silk in an appropriate design. Period furnishing does not necessarily mean a greater outlay than the nondescript and miscellaneous method so often seen.

Whatever the plan for furnishing a house may be, the balance of decoration must be kept; the same general feeling throughout all connecting parts. If a drawing-room is too fine for the hall through which one has to pass to reach it, the balance is upset. If too simple chairs are used in a grand dining-room the balance is upset, the fitness of things is not observed. When the happy medium is struck throughout the house one feels the delightful well-bred charm which a regard for the unities always gives. It is not only in the quality of the decorations that this feeling of balance must be kept, but in the style also. If one chooses a period style for the drawing-room it is better to keep to it through the house, using it in its different expressions according to the needs of the different rooms. If one style throughout should seem a bit monotonous at least one nationality should be kept, such as French, or English. If several styles of French furniture are used do not have them in the same room; for instance, Louis XV and Empire have absolutely nothing in
common, but very late Louis XVI and early Empire have to a certain extent. It does not give the average person a severe shock to walk from a Louis XVI hall into a Louis XV drawing-room, but the two mixed in one room do not give a pleasing effect. The oak furniture of Jacobean days does not harmonize with the delicate mahogany furniture of the eighteenth century in England. The delicate beauty of Adam furniture would be lost in the greatness of a Renaissance salon. A lady whose dining-room was furnished in Sheraton furniture one day saw two elaborate rococo Louis XV console tables which she instantly bought to add to it. The shopman luckily had more sense of the fitness of things than a mere desire to sell his wares, and was so appalled when he saw the room that he absolutely refused to have them placed in it. She saw the point, and learned a valuable lesson. One could go on indefinitely, giving examples to warn people against startling and inappropriate mixtures which put the whole scheme out of key.

I am taking it for granted that reproductions are to be chosen, as originals are not only very rare, but also almost prohibitive in price. Good reproductions are carefully made and finished to harmonize with the color scheme. The styles most used at present are, Louis XIV, XV, XVI, Jacobean, William and Mary, and Georgian. Gothic, Italian and French Renaissance, Louis XIII, and Tudor styles are not so commonly used. We naturally associate dignity and
grandeur with the Renaissance, and it is rather difficult to make it seem appropriate for the average American house, so it is usually used only for important houses and buildings. Some of the Tudor manor houses can be copied with delightful effect. The styles of Henri II and Louis XIII can both be used in libraries and dining-rooms with most effective and dignified results.

The best period of the style of Louis XV is very beautiful and is delightfully suited to ball-rooms, small reception-rooms, boudoirs, and some bedrooms. In regard to these last, one must use discretion, for one would not expect one's aged grandmother to take real comfort in one. Nor does this style appeal to one for use in a library, as its gayety and curves would not harmonize with the necessarily straight lines of the bookcases and rows of books. Any one of the other styles may be chosen for a library.

The English developed the dining-room in our modern sense of the word, while the French used small ante-chambers, or rooms that were used for other purposes between meals, and I suppose this is partly the reason we so often turn to an English ideal for one. There are many beautiful dining-rooms done in the styles of Louis XV and XVI, but they seem more like gala rooms and are usually distinctly formal in treatment. Georgian furniture, or as we so often say, Colonial, is especially well suited to our American life, as one can have a very simple room, or one carried out in the
most delightful detail. In either case the true feeling must be kept and no startling anachronisms should be allowed; radiators, for instance, should be hidden in window-seats. This same style may be used for any room in the house, and there are beautiful reproductions of Chippendale, Adam, Hepplewhite, and Sheraton furniture that are appropriate for any need.

In choosing new "old" furniture, do not buy any that has a bright and hideous finish. The great cabinet-makers and their followers used wax, or oil, and rubbed, rubbed, rubbed. This dull finish is imitated, but not equaled, by all good furniture makers, and the bright finish simply proclaims the cheap department store.

In parts of the country Georgian furniture has been used and served as a standard from the first, and it is a happy thing for the beauty of our homes that once more it has come into its own. It is the high grade of reproduction which has made it possible.

The mahogany used by Chippendale, and in fact by all the eighteenth century cabinet-makers, was much more beautiful than is possible to get to-day, for the logs were old and well seasoned wood, allowed to dry by the true process of time, which leaves a wonderful depth of color quite impossible to find in young kiln-dried wood. The best furniture makers nowadays, those who have a high standard and pride in their work, have by careful and artistic staining and beau-
tiful finish, achieved very fine results, but the factory article
with its dreadful "mahogany" stain, its coarse carving, and
its brilliant finish, shows a sad difference in ideal.
The best reproductions are well worth buying, and,
as they are made with regard to the laws of con-
struction, they stand a very good chance of becoming valued
heirlooms. There are certain characteristics of all the
eighteenth century cabinet-makers, both English and
French, which are picked out and overdone by ill-informed
manufacturers. The rococo of Chippendale is coarsened, his
Chinese style loses its fine, if eccentric, distinction, and the
inlay of Hepplewhite and Sheraton is another example of
spoiling a beautiful thing. Thickening a line here and there,
or curving a curve a bit more or less, or enlarging the amount
of inlay, achieves a vulgarity of appearance quite different
from the beautiful proportions of the originals, and it is this
which one must guard against in buying reproductions. The
lack of knowledge of correct proportion is not confined to the
cheaper grades, where necessary simplicity is often a pro-
tection, but is apt to be found in all. The best makers, as
I have said, take a pride in their work and one can rely on
them for fine workmanship and being true to the spirit of
the originals.

There is one matter of great importance to be kept in
mind and practiced with the sternest self-control, and that
is, to eliminate, eliminate, eliminate. Walk into the center of
a room and look about with seeing, but impersonal eyes, and you will be astonished to find how many things there are which are unnecessary, in fact, how much the room would be improved without them. In every house the useless things which go under the generic name of "trash" accumulate with alarming swiftness, and one must be up with the lark to keep ahead of the supply. If something is ugly and spoils a room, and there is no hope of bringing it into harmony, discard it; turn your eyes aside if you must while the deed is being done, but screw your courage to the sticking point, and do it. She is, indeed, a lucky woman who can start from the beginning or has only beautiful heritages from the past, for the majority of people have some distressingly strong pieces of ugly furniture which, for one reason or another, must be kept. One sensible woman furnished a room with all her pieces of this kind, called it the Chamber of Horrors, and used it only under great stress and strain, which was much better than letting her house be spoiled.

A home should not be a museum, where one grows exhausted going from one room to another looking at wonderful things. Rather should it have as many beautiful things in it as can be done full justice to, where the feeling of simplicity and restfulness and charm adds to their beauty, and the whole is convincingly right. The fussy house is, luckily, a thing of the past, or fast getting to be so, but we should all help the good cause of true simplicity. It does not debar
one from the most beautiful things in the world, but adds dignity and worth to them. It does not make rooms stiff and solemn, but makes it possible to have the true gayety and joy of life expressed in the best periods.
Georgian Furniture
Georgian Furniture

A DELIGHTFUL renaissance of the Georgian period in house decoration is being felt more and more, and every day we see new evidence that people are turning with thanksgiving to the light and graceful designs of the eighteenth century English cabinet-makers. There is a charm and distinction about their work which appeals very strongly to us, and its beauty and simplicity of line makes delightful schemes possible.

The Georgian period seems especially fitted for use in our homes, for it was the inspiration of our Colonial houses and furniture, which we adapted and made our own in many ways. The best examples of Colonial architecture are found in the thirteen original states. In many of these houses we find an almost perfect sense of proportion, of harmony and balance, of dignity, and a spaciousness and sense of hospitality, which few of our modern houses achieve. The halls were broad and often went directly through the house, giving a glimpse of the garden beyond; the stairs with their carefully thought-out curve and sweep and well placed landings, gave at once an air of importance to the house, while the large rooms opening from the hall, with their white woodwork, their large fire-
places, and comfortable window-seats, confirmed the impression.

It is to this ideal of simple and beautiful elegance that many people are turning. By simplicity I do not mean poverty of line and decoration, but the simplicity given by the fundamental lines being simple and beautiful with decoration which enhances their charms, but does not overload them. Even the most elaborate Adam room with its exquisite painted furniture, its beautifully designed mantel and ceiling and paneled walls, gave the feeling of delightful and beautiful simplicity. This same feeling is expressed in the furniture of Louis XVI, for no matter how elaborate it may be, it is fundamentally simple, but with a warmer touch than is found in the English furniture of the same time.

The question of period furnishing has two sides, and by far the more delightful side is the one of having originals. There is a glamor about old furniture, a certain air of fragility, although in reality it is usually much stronger than most of our modern factory output, which adds to the charm. With furniture, as with people, breeding will out. When one has inherited the furniture, the charm is still greater, for it is pleasant to think of one's own ancestors as having used the chairs and tables, and danced the stately minuet, with soft candle-light falling from the candelabra, and the great logs burning on the old brass andirons. But if one cannot have one's own family traditions, the next best thing is to have
furniture with some other family's traditions, and the third choice is to have the best modern reproductions, and build up one's own traditions oneself.

The feeling which many people have that Georgian furniture was stiff and uncomfortable is not borne out by the facts. The sofas were large and roomy, the settees delightful, the arm-chairs and wing chairs regular havens of rest, and when one adds the comfort which modern upholstery gives, there is little left to desire. Even the regulation side-chair of the period, which some think was the only chair in very common use, is absolutely comfortable for its purpose. Lounging was much less in vogue then than nowadays and the old cabinet-makers realized that one must be comfortable when sitting up as well as when taking one's ease. One must not be deterred by this unfounded bugaboo of discomfort if one wishes a room or house done after the great period styles of the eighteenth century. With care and knowledge, the result is sure to be delightful and beautiful.

This little book, as I have said before, is not intended to be a guide for collectors, for that is a very big subject in itself, but is meant to try to help a little about the modern side of the question. There are many grades of furniture made, and one should buy with circumspection, and the best grade which is possible for one to afford. The very best reproductions are made with as much care and knowledge and skill as the originals, and will last as long, and become treasured
heirlooms like those handed down to us. They are works of art like their eighteenth century models. The wood is chosen with regard to its beauty of grain, and is treated and finished so the beauty and depth of color is brought out, and the surface is rubbed until there is a soft glow to it. If one could have the ages-old mahogany which Chippendale and his contemporaries used, there would be little to choose between the originals and our best reproductions, so far as soundness of construction and beauty of detail go. But the fact that they were the originals of a great style, that no one since then has been able to design any furniture of greater beauty than that of England and France in the eighteenth century, and that we are still copying it, gives an added charm to a rare old chair or sideboard or mirror. The modern workman in the best workshops is obliged to know the different styles so well that he cannot make mistakes, and if he ventures to take a little flight of fancy on his own account, it will be done with such correctness of feeling that one is glad he flew; but few attempt it. In the lower grade of reproductions one must have an eagle eye when buying. I saw a rather astounding looking Chippendale chair in a shop one day, with a touch of Gothic—a suspicion of his early Dutch manner—and, to give a final touch, tapering legs with carved bellflowers! "What authority have you for that chair?" I asked, for I really wanted to know what they would call the wonder.
GEORGIAN FURNITURE

"That," the shopman answered, the pride of knowledge shining in his eyes, "is Chinese Chippendale."

Another anachronism which has appeared lately, and sad to say in some of the shops that should know better, is painted Adam furniture with pictures on it of the famous actresses of the eighteenth century. The painting of Angelica Kauff-
man, Cipriani, Pergolesi and the others, was charming and delightful. Nymphs and cupids, flowers, wreaths, musical instruments, and poetical little scenes, but never the head of a living woman! The bad taste of it would have been as apparent to them as putting the picture of Miss Marlowe, or Lillian Russell on a chair back would be to us.

The finish is another matter to bear in mind. There is a thick red stain, which for some mysterious reason is called mahogany, which is put on cheaper grades of furniture and finished with a high polish. Fortunately, it is chiefly used on furniture of vulgar design, but it sometimes creeps in on better models. Shun it whenever seen. The handles must be correct also, and a glance at the different illustrations will be of help in this matter.

The pieces of furniture used throughout a house, no matter what the period may be, are more or less the same, so many chairs, tables, beds, mirrors, etc., and when one has decided what one's needs are, the matter of selection is much simplified. Of course one's needs are influenced by the size of the house, one's circumstances, and one's manner of life.
To be successful, a house must be furnished in absolute harmony with the life within its walls. A small house does not need an elaborate drawing-room, which could only be had at the expense of family comfort; a simple drawing-room would be far better, really more of a living-room. In a large house one may have as many as one wishes.

A house could be furnished throughout with Chippendale furniture and show no sign of monotony of treatment. The walls could be paneled in some rooms, wainscoted in others, and papered in others. This question of paper is one we have taken in our own hands nowadays, and although it was not used much before the late eighteenth and early nineteenth centuries, there are so many lovely designs copied from old-time stuffs and landscape papers, which are in harmony with the furniture, that they are used with perfect propriety. One must be careful not to choose anything with a too modern air, and a plain wall is always safe.

The average hall will probably need a pair of console tables and mirrors, some chairs, Oriental rugs, a tall clock if one wishes, and, if the hall is very large and calls for more furniture, there are many other interesting pieces to choose from. A hall should be treated with a certain amount of formality, and the greater the house, the greater the amount; but it also should have an air of hospitality, of impersonal welcome, which makes one wish to enter the rooms beyond where the real welcome waits.
This group of old mirrors indicates the extent to which refinement of design was carried during the Georgian period in England—the time of the great cabinet-makers.
One of the many types of “four-poster” used by our forefathers. The Sheraton chair beside it is a very good example.
GEORGIAN FURNITURE

The window frames of Colonial and Georgian houses were often of such good design that no curtains were used, and the wooden inside shutters were shut at night. Nowadays the average house has what might be called utility woodwork at its windows and so we cover them with curtains. These curtains may be of linen, cretonne, damask, or brocade, according to the house, and may either fall straight at the side with a slight drapery or shaped or plain valance at the top, or be drawn back from the center. A carved cornice or the regular box frame may be used.

The stairs were often of beautifully polished hardwood, and they were sometimes covered with rugs. Large Chinese porcelain jars on the console tables are suitable, and other beautiful ornaments.

As the drawing-room usually opens from the hall, it is better to keep both rooms in the same general scale of furnishing. The average sized drawing-room will need sofas, a small settee, two or three tables, one of them a gallery table if desired, chairs of different shapes and size, mirrors, a cabinet if one has rare pieces of old porcelain, and candelabra, Oriental rugs, a fire screen, ornaments, and pictures, but these last should not be of the modern impressionistic school. The woodwork should be white, or light, and the furniture covered with damask, needlework, brocade or tapestry.

The dining-room can be made most charming with corner cupboards and cabinet, a large mahogany table and side
table and beautiful morocco covered chairs. Chippendale did not make sideboards in our sense of the word, but used large side tables. One of the modern designs which many like to use, for to them it seems a necessity, is a sideboard made in the style of Chippendale. The screen may be leather painted after "the Chinese taste," or it may be damask. The chairs may be covered with tapestry or damask if one does not care for morocco. Portraits are interesting in a dining-room, or old prints, or paintings, and if you can get the old dull gold carved frames, so much the better. They may also be set in panels.

The bedrooms may have either four-post canopy beds or low-posts beds. Chippendale's canopy beds had usually a carved cornice with the curtains hung from the inside. The other furniture should consist of a dressing-table, a chest of drawers to correspond with a chiffonier, a highboy, a sewing table, a bedside table, a comfortable sofa, a fireside or wing chair and other chairs according to one's need. The walls may be covered with either an old-fashioned or plain paper,—or paneled, with hangings and chair coverings of chintz or cretonne. The bed hangings may be of cretonne also, for it makes a very charming room, but if one objects to colored bed hangings, white dimity, or muslin or linen may be used.

It is the art of keeping the correct feeling which makes or mars a room of this kind, and no pieces of markedly modern and inharmonious furniture should be used. In furnish-
ing a house in Georgian or Colonial manner one need not keep all the rooms in the same division of the period, for there is a certain general air of harmony and relationship about them all, and the common bond of mahogany makes it possible to have a Chippendale library, an Adam drawing-room, a Hepplewhite dining-room and a Sheraton hall, or any other combination desired. The spirit of all the eighteenth century cabinet-makers was one of honest construction and beauty of line and workmanship. When they took ideas from other sources they made them so distinctly their own, so essentially English that there is a family resemblance through all their work.

Adam decoration and furniture makes most delightful rooms. The painted satinwood furniture for dining-room, drawing-room and bedrooms, lends itself to lovely schemes with its soft golden tones, its delightfully woven cane chair backs and panels. A room on the sunny side of the house, with a soft old ivory colored wall, dull blue silk curtains, and a yellow and blue Chinese rug, would be most charming with this satinwood furniture.

Then, as I have said before, there are the many different shades of enameled and carved furniture and also beautiful natural wood. One can have more of a sideboard in an Adam than in a Chippendale room, as he used two pedestals, one at each end of a large serving-table. He often made tables to fit in niches, which is a charming idea.
An Adam mantel is very distinctive and one should be careful in having it correct. There are beautiful reproductions made. The lamp and candle shades should also be designed in the spirit of the time. There are lovely Adam designs in nearly all materials suitable for hangings and chair coverings. Oriental rugs or plain colored carpets appeal to us more than large-figured rugs. Adam sometimes had special rugs made exactly reproducing the design of the ceiling, but it is an idea that is better forgotten.

With Hepplewhite and Sheraton the same general ideas hold; keep to the spirit of the furniture, try to have a central idea in the house furnishing, so that the restful effect of harmony may be given.

The rugs which harmonize best with Georgian furniture are Orientals of different weaves and colors, or plain domestic carpet rugs. The floor should be the darkest of the three divisions of a room — the floor, the walls, the ceiling, but it should be an even gradation of color value, the walls half-way in tone between the other two. This is a safe general plan, to be varied when necessity demands. In drawing-rooms light and soft colors are usually in better harmony than dark ones, and a wide and beautiful choice can be made among Kermanshah, Kirman, Khorasan, Tabriz, Chinese, Oman rugs, and many others. It is more restful in effect if the greater part of the floor is covered with a large rug, but if one has beautiful small rugs they may be used if they are
These copies of rare old pieces of furniture are of the best. The choice of wood, the carving, the inlay, all show the highest ideals. The Chinese Chippendale table shows the pagoda effect, and the Hepplewhite desk has the charm of a secret drawer.
This chest of drawers and glass would make a beautiful keynote for the furniture of a bedroom.

The beauty of the walnut in this set of William and Mary furniture is remarkable.
enough alike in general tone to escape the appearance of being spotty. One should try them in different positions until the best arrangement is found.

Living-rooms and libraries are usually more solid in color than drawing-rooms and so need deeper tones in the rugs. The choice is wide, and the color scheme can be the deciding note if one is buying new rugs. If one already has rugs, they must be the foundation for the color scheme of the room.
Furnishing With French Furniture
The mantel, with its great glass reaching to the cornice, was a characteristic wall treatment in French rooms during the 18th century. This modern room shows its charm.
The beauty and dignity of the painted over-door is well shown in this drawing-room.
Furnishing With French Furniture

"This is my Louis XVI drawing-room," said a lady, proudly displaying her house.

"What makes you think so?" asked her well informed friend.

To guard against the possibility of such biting humor one must be ever on the alert in furnishing a period room. It is not a bow-knot and a rococo curve or two that will turn a modern room, fresh from the builder's hands, into a Louis XV drawing-room.

French furniture is not appropriate to all kinds of houses, and it is often difficult to adapt it to circumstances over which one has no control. The leisurely and pleasant custom of our ancestors of building a house as they wished it, and what is more, living in it for generations, is more or less a thing of the past. Nowadays a house is built, and is complete and beautiful in every way, but almost before the house-warming is over, business is sitting on the doorstep, and so the family moves on. We, as a nation, have not the comfortable point of view of the English who consider their home, their home, no matter how the outside world may be behaving. Their front doors are the protection which insures their cherished privacy, and the feeling that they are as set-
tled as the everlasting hills gives a calmness to their attitude toward life which is often missing from ours. How many times have we heard people say when talking over plans—"Have it thus and so, for it would be much better in case we ever care to sell." This attitude, to which of course there are hundreds of exceptions, is an outgrowth of our busy life and our tremendous country. The larger part of the home ideal is the one which Americans so firmly believe in and act upon—that it is the spirit and atmosphere which makes a home, and not only the bricks and mortar.

It is this point of view which makes it possible for many of us to live happily in rented houses whose architecture and arrangement often give us cold shivers. We are not to blame if all the proportions are wrong; and there is a certain pleasure in getting the better of difficulties.

If one is building a house, or is living in one planned with a due regard to some special period, and has a well thought out scheme of decoration, the work is much simplified; but if one has to live in the average nondescript house and wishes to use French furniture, the problem will take time and thought to solve. In this kind of house, if one cannot change it at all, it is better to keep as simple and unobtrusive a background as possible, to have the color scheme and hangings and furniture so beautiful that they are a convincing reason themselves of the need of their being there, but one should not try to turn the room itself into a period room,
for it would mean failure. The walls may be covered with a light plain paper, or silk, the woodwork enameled white or cream or ivory, and then with one's mirrors and furnishings, the best thing possible has been done, and it ought to be a charming room, if not a perfect one. If one can make a few changes I advise new lighting fixtures and a new mantel, for these two important objects in the room are conspicuous and nearly always wrong.

It is almost impossible to give a list of furniture for each room in a house, as each house is a law unto itself, but the fundamental principles of beauty and utility and appropriateness apply to all.

The furniture of the time of Louis XIV, having so much that is magnificent about it, is especially well suited to large rooms for state occasions, great ballrooms and state drawing-rooms. These rooms not being destined for everyday use should be treated as a brilliant background; paneling, painting, tapestry, and gilding should decorate the walls, and beautiful lights and mirrors should aid in the effect of brilliancy. It must be done with such knowledge that there is no suggestion of an hotel about it. Console tables, and large and dignified chairs should be used for furniture. Nothing small and fussy in the way of ornaments should be put in the rooms, for they would be completely out of scale and ruin the effect.

Every house does not need these rooms for the elaborate
side of life, and the average drawing-room is a much simpler affair. If both kinds are required the simpler one should be in the same general style as the great rooms, but not on so grand a scale. If the style of Louis XV is chosen for all, in the family drawing- and living-rooms the paneling, or dado, and furniture should be of the simpler kind, and beautiful, gay, and home-like rooms, evolved with soft colored brocades, Beauvais or Gobelin tapestry, and either gilded or enameled or natural walnut furniture. The arm-chairs or bergeres of both Louis XV and Louis XVI are very comfortable, the chaise-longue cannot be surpassed, and the settees of different shapes and sizes are delightful. There need be no lack of comfort in any period room, whether French or English.

A music room, to be perfect, should not have heavy draperies to deaden the sound, and the window and door openings should be treated architecturally to make this possible. In a French music room the walls may be either paneled, or have a dado with a soft tint above it. This space may be treated in several ways: it may have silk panels outlined with moldings, or dainty pastoral scenes painted and framed with wreaths and garlands of composition. The style of the Regency with its use of musical instruments for decorative motifs is also attractive. The chairs should be comfortable, the lights soft and well shaded side-lights, with a plentiful supply near the piano.
A beautiful doorway in the bedroom of the Empress, Compiègne. The fastening shows how much thought was expended on small matters, so the balance of decoration would be kept. The chairs are Louis XVI
An exquisite reproduction of the bed of Marie Antoinette

A simple but charming Louis XVI bed in enamel and cane
A piano is usually a difficulty, for they are so unwieldy and dark that they are quite out of key with the rest of the room. We have become so used to its ugliness, however, that, sad to say, we are not so much shocked by it as we should be, thinking it a necessary evil. If we walk through the show rooms of one of the great piano companies we shall see that this is a mistake, for there are many cases made of light colored woods, and some have a much more graceful outline than the regulation piano. Cases can be made to order to suit any scheme, if one has a competent designer. A music room should not have small and meaningless ornaments in it; the ideal is a restful and charming room where one may listen with an undistracted mind.

The modern dining-room with all its comforts is really of English descent. In France, even in the eighteenth century, only the palaces and great houses had rooms especially set apart for dining-rooms. Usually a small ante-chamber was used, which served as a boudoir or reception room between meals. To our more established point of view it seems a very casual method. At last, late in the century, the real ideal of a dining-room began to gain ground, and although they were very different from ours, we find really charming ones described and pictured. The walls were usually light in tone, paneled, with graceful ornamentation, and often there were niches containing wall-fountains of delightful design. The sideboards were either large side-tables, or a species of side-
table built in niches, with a fountain between them which was used as a wine cooler. These fountains where cupids and dolphins disported themselves would be a most attractive feature to copy in some of our rooms, in country houses especially. The tables were round or square, but not the extension type which came later from England, and the chairs were comfortable, with broad upholstered or cane seats, and rather low backs. There should be a screen to harmonize with the room in front of the pantry door. We also add hangings, for, as I have said many times, our window-frames are not a decoration in themselves. Old prints show most delightfully the manner in which curtains were hung when they were used; the very elaborate methods, however, were not used by the better class.

A morning-room should be furnished as a small informal living-room, and the simpler style of the chosen period used.

The style of Louis XVI is beautifully adapted to libraries, for they do not have to be dark and solid in style, as many seem to think. In fact a library may be in any style if carried out with the true feeling and love of books, but of course some styles are more appropriate than others. In a Louis XVI library the paneling gives way to the built-in bookcases which are spaced with due regard to keeping the correct proportions. There is usually a cupboard space running round the room about the height of a dado and projecting a little beyond the bookcases above. The colors of the
rugs and hangings may be warm and rich as the books give the walls a certain strength.

There are also beautiful reproductions of bedroom furniture, chairs and dressing-tables, desks, chiffoniers and Chaises-longues, and beds.

Andirons, side-lights for the walls and dressing-table, doorknobs and locks, can all be carried out perfectly. Lamp and candle shades and sofa cushions should all be in keeping. The walls may be paneled in wood enameled with white or some light color, or they may be covered with silk or paper, in a panel design, with curtains to match. There are lovely designs in French period stuffs.

The rugs most appropriate for French period rooms are light or medium in tone, and of Persian design. The floral patterns of the Persians seem to harmonize better with the curves and style of furniture than do the geometrical designs of the Caucasian rugs. Savonnerie and Aubusson rugs may also be used, if chosen with care, and the plain carpets and rugs mentioned later are a far better choice than gaudy Orientals of modern make, or bad imitations.
Craftsman Furniture
Craftsman Furniture

For the greater part of the nineteenth century art in household decoration did not exist. "Early Victorian" threw its baleful influence over all, and the houses were ugly and the rooms of false proportions, the furniture bad in design, usually of black walnut with bunches and knobs of supposed ornament upon it, the carpets were overpoweringly bright with huge figures, the curtains were so festooned that they became useless for their purpose. The fact that it was considered possible to put magenta and scarlet side by side, points the moral of the tale of ugliness. At last human nature could stand it no longer, and William Morris, that benefactor of mankind, came to the rescue. He worked early and late trying to teach the ideal of beauty to a public almost blind from the glare of ugliness. Slowly things grew better, until now we of the twentieth century think that we have some right to sit in judgment. Out of the chaos have come several results, all with the same end in view — the beauty and comfort of the home. First we have awakened to the high artistic and constructive standards of the seventeenth and eighteenth centuries, and welcome the many reproductions of French and English furniture of those times. Another result has been to inspire a great
wish to form a new style of decoration, which is shown in the “Art Nouveau” movement in Europe. It is founded on the idea of growth in nature, long beautiful curves, which unfortunately are not always applicable to furniture. The best work is done in Europe, and we see very little of it here. It is still in its infancy and as time goes on will probably improve. Some already has beauty and fine feeling for design, and the lovely color schemes of inlaid wood and metal give a charm to some of the finished examples which a picture quite fails to convey. The larger part, however, has, to my mind, too much restlessness of line given by the endless curves, and the many ugly inappropriate designs necessitate awkward and often faulty construction, and make it a style which one, so far, can quite easily do without. The development of “Art Nouveau” in England is called “Quaint,” and is often worse than its Continental relation.

In America the best development of all has appeared in our really worthy Craftsman or Mission furniture. It is simple, straightforward, and honest in construction, and nothing could be better for the bungalow type of house, for certain living-rooms, dens, and libraries, in some types of country house. It is heavy furniture both in effect and reality, and in buying it one should be careful to get only the best kind, for there are several grades. The best makes, as I have said, have real worth and beauty when in their correct surroundings, and with appropriate curtains and rugs
A consistent example of the craftsman room. Notice how the heavy and cumbersome "mission" type of furniture has given place to more pleasing proportions—but rocking-chairs should be banished from all rooms.
The touch of the well-trained craftsman shows in this fire-corner
and cushions make delightful and home-like interiors. The woodwork must harmonize with the furniture, and there must be nothing dainty or delicate in the decoration or ornaments. Plain walls, or if a figured paper is desired, a low toned one with no startling design to it should be chosen. There are some good paneled effects, and leather paper is also good to use, while dull warm gold over a wainscot is beautiful in certain rooms.

The rich dark tones of Bokhara rugs go beautifully with Craftsman furniture, as do also Khivas, Kurdistans, and Beluchistans. There are many makes of domestic rugs which are also appropriate.

The curtains may be velours, or arras cloth or heavy linen, or cretonne, or other stuff; the choice is wide, and a couched or stenciled design is often added. The cushions should be simple in shape and rich in color, and form a part of the color scheme of the room, and it is almost needless to say they should not be pictorial. The lamps and ornaments should be brass or copper or pottery, and all ornaments must be kept in key and scale; a Dresden clock, for instance, no matter how lovely it is, would be entirely out of place in such a room. Books there should be in abundance, and also magazines, and of great importance is an open fire for winter days.
Country Houses
A hall to conjure with—although a Hepplewhite or Sheraton chair would be
more in keeping
A very rare block-front chest of drawers with the original brasses
Country Houses

The Country House is a comparatively modern idea, and one which has added much to the joy of life. There are all kinds and conditions of them, great and small, grand and simple, and each is a joy to the proud possessor.

Life was such a turbulent affair in the Middle Ages that country life in the modern sense was an impossibility. The chateaux and castles and large manor-houses were strongly fortified, and there were inner courts for exercise. When war became the exception and not the rule, the inherent love in all human beings for the open began to assert itself, and the country house idea began to grow.

Italy was the first country where we find this freedom of attitude exemplified in the beautiful Renaissance villas near Rome and Florence. The best were built during the sixteenth century, and were owned by the great Italian families like the de Medici and d’Este. They seem more like places built for the parade and show of life than homes, but the home ideal with all its conveniences was another outgrowth of peace.

The plan of an Italian villa is very interesting to study,
to see how every advantage was taken of the land, how the residence, or casino, was placed in regard to the formal garden and the view over the valley, for they were usually on a hillside and the slope was terraced, how the statues and fountains, the beautiful ilex and cypress and orange trees, the box-edged flower-beds and gravel paths, all formed a wonderful setting for the house, and together made a perfect whole. The Italian villa was not necessarily large, in fact the Villa Lante contains only six acres, which are divided into four terraces, the house being on the second and built in two parts, one on each side. Each terrace has a beautiful fountain, with a cascade connecting those on the fourth and third. This villa is indeed, an example of taking advantage of a fairly small space. It was built by the great Vignola in 1547, and although slightly showing the wear of time, has all the beauty and charm and romance which only centuries can give.

The Italian villa can be adapted to the American climate and scenery and point of view, but it must be done by one of the architects who have made a deep study of the Italian Renaissance so the true feeling will be kept. There are some beautiful examples already in the country.

In France, the chateaux which have most influenced country house building are those which were built during the sixteenth century, many of them during the reign of Francis Ist. Among the number are Azay le Rideau, Chenonceaux,
and Chaumont. Blois and Amboise are also absorbingly interesting, but belong partly to an earlier time. The chateau region in Touraine is a treasure land of architectural beauty. In the time of Louis XIV Le Nôtre changed many of these old chateaux from their fortified state to the more open form made possible by a peaceful life.

We turn to England for the most perfect examples of country houses, for the theory of country living is so thoroughly understood there, one might really say it is a national institution. Many of the manor-houses, both great and small, are beautiful examples of Tudor architecture, which seems especially suited to their setting of lovely green parks. The smaller country house, which has no pretention to being a show place, is as perfect in its way. The English love for out-of-doors makes them achieve wonders with even small gardens, and the climate, being gentle, helps matters immensely.

In America we are taking up the English country house ideal more and more and adapting it to our own needs. The question of architecture is a question of personal choice influenced by climate, and there are now numberless charming houses scattered over the length and breadth of the land which have been built with the purpose of being country homes. They are not for summer use only, but all the year round keep their hospitable doors open, or else the season begins so early and ends so late, that, with the holiday time be-
tween, the house hardly seems closed at all. It is this attitude which is changing country house architecture to a great extent. The terraces and porches and gardens and glass-houses are all there, but the house itself is more solidly built and is prepared to stand cold weather.

For the average American the best types of country house to choose from are the smaller Tudor manor-houses, Italian villas, Georgian architecture in England, and our own Colonial style which of course was founded on the Georgian. In the south and southwestern parts of this country a modified Spanish type may be used in place of Tudor, which does not give the feeling of cool spaces so necessary in hot climates. The bungalow type is also popular in the South.

There are many architects in this country who understand thoroughly the plan and spirit of Colonial times, and who succeed in giving to the comforts of modern days the true stamp of the eighteenth century. The style makes most delightful houses, and with the great supply of appropriate furniture from which to choose, it would be hard to fail in having a charming whole.

The house and garden should be planned together to have the best effect. Each can be added to as time goes on, but when a plan is followed there is a look of belonging together which adds greatly to the charm.

In an all-the-year country house a vestibule is a necessity as much as in a town house, and the hall should be treated
There are few treatments for the walls of a Colonial dining-room that can compare with white paneled wainscoting and a decorative frieze in low tones above. The subject, however, should be in keeping.
A library door which shows how those who understand the true spirit of the Renaissance make use of it in modern homes.
with the dignity a hall deserves, and not as a second living-
room. In many English houses of Tudor days the stairs
were behind a carved screen, or concealed in some manner,
which made it possible to use the hall as a gathering place.
Our modern hall is not a descendant of this old hall of a past
day (the living-room is much more so), but is really only a
passage, often raised to the n-th power, connecting the dif-
ferent rooms of the house, and should be treated as such.
The stairs and landing and vista should be beautiful, and
the furnishing should be dignified and in perfect scale with
the rest of the house. Marble stairs and tapestry and old
carved furniture and beautiful rugs, or the simplest pos-
sible furniture, may be used, but the hall should have an
impersonally hospitable air, one which gives the keynote of
the house, but reserves its full expression until the privacy
of the living-rooms is reached.

The average country house is neither very magnificent
nor very simple, but strikes the happy medium and achieves
a most delightful home-like charm, which at the very outset
makes life seem well worth living. It is rarely furnished
in a period style throughout, but has the modern air of com-
fort which good taste and correct feeling give. For in-
stance, the hall may have paneling and Chippendale mir-
ror, a table, and chairs; the living-room furnished in a gen-
eral Colonial manner mixed with some comfortable stuffed
furniture, but not over-stuffed, lovely chintz or silk hang-
ings, and a wide fireplace; the morning-room on something the same plan, but a little less formal; and the drawing-
room a little more so, say in Adam or simple Louis XVI
furniture. The library should have plenty of comfortable
sofas and chairs, and a large table (it is hard to get one too
large), some of the bookcases should be built in to form
part of the architectural plan of the room, and personally
I think it is a better idea to have all the space intended for
bookcases built in in the first place, as this insures harmony
of plan. Another important thing in a library is to have
the lights precisely right, and the window-seats and the fire-
place should be all that their names imply in the way of
added charm and comfort to the room. The dining-room
should be bright and cheerful and in harmony with the
near-by rooms. A breakfast-room done in lacquer is very
charming.

The bedrooms should be light and airy, and so planned
that the beds can be properly placed. They may be fur-
nished in old mahogany, French walnut in either Louis XV
or XVI style, or in carefully chosen Empire; painted Adam
furniture is also lovely, and willow furniture makes a fresh
and attractive room. The curtains should be hung so they
can be drawn at night if desired, and the material should
be chosen to harmonize in design with the room.

The children's rooms should be sunny and bright and
furnished according to their special tastes, which if too
astounding, as sometimes happens, can be tactfully guided into safe channels.

The servants should be given separate bedrooms, a bathroom, and a comfortable sitting-room beside their dining-room. Making them comfortable seems a simple way of solving the servant question.

The bungalow type of small country house is usually very simply furnished, and the best type of Mission furniture or willow is especially well suited to it. Bungalows are growing more and more in favor, and, although they originated in America in the West, we find delightful ones everywhere, on the Maine coast and in the woods and mountains. They are a tremendous advance over the small and elaborate house of a few years ago.

Cretonne and chintz can be used in all the rooms of a country house with perfect propriety, and is a really lovely method of furnishing, as it is fresh and washable, and comes in all gradations of price. Willow furniture with cretonne cushions makes a pleasant variety with mahogany in simple rooms.

Fresh air and sunlight, lovely vistas through doors and windows of the garden beyond, cool and comfortable rooms furnished appropriately, and with an atmosphere about them which expresses a hospitable and charming home spirit, is the ideal standard for a country house.
Simple furniture is most appropriate for the average country house. Cane is used in many styles and gives a cool and dainty appearance to the room.
This William and Mary settee would be delightful in a country house. There are chairs to match it.

The carving and proportions of this bedroom set are extremely fine, and would do honor to Hepplewhite himself.
The Nursery and Play-room
The Nursery and Play-room

We should be thankful that the old idea of a nursery has passed away and instead of the dreary and rather shabby room has come the charming modern nursery with its special furniture and papers, its common sense and sanitary wisdom and its regard for the childish point of view. The influence of surroundings during the formative years of childhood has a deal to do with the child's future attitude toward life, and now that parents realize this more, the ideal nursery has simplicity, charm and artistic merit, all suited to the needs of its romping inhabitants.

The wall-papers for nurseries are especially attractive with their gay friezes of wonderful fairy-tale people, Mother Goose, Noah's Ark and happy little children playing among the flowers. Some of the designs come in sets of four panels that can be framed if desired. A Noah's Ark frieze with the animals marching two by two under the watchful eyes of the Noah family, with an ark and stiff little Noah's Ark trees, will give endless pleasure if placed about three feet from the floor where small tots can take in its charm. If placed too high, it is very often not noticed at all. Some of the most attractive nurseries have painted walls with special designs stenciled on them.
If any one of these friezes is placed above a simple wainscot, the effect is charming. The paper for nurseries is usually waterproof, for a nursery must be absolutely spick and span. Another thing that gives much pleasure in a nursery is to build on one side of the room a platform about a yard wide and six inches high, and cover it with cushions.

The furniture in a day nursery should consist of a toy cupboard stained to match the color scheme of the room and large enough for each child to have his own special compartment in it. If the children’s initials are painted or burned on the doors, it gives an added feeling of pride in keeping the toys in order. There are many designs of small tables and chairs made with good lines, and the wicker ones with gay cretonne cushions are very attractive. The tables and chairs should not have sharp corners and should be heavy enough not to tip over easily. There should be a bookcase for favorite picture-books. Besides the special china for the children’s own meals there should be a set of play china for doll’s parties. A sand table, with a lump of clay for modeling, a blackboard and, in the spring, window-boxes where the children can plant seeds, will all add vastly to the joy of life.

And do not forget a comfortable chair for the nurse-maid. White muslin curtains with side hangings of washable chints or linen or some special nursery design in cretonne should hang to the sill.
The colors in both day and night nurseries should be soft and cheerful, and the color scheme as carefully thought out as for the rest of the house. Both rooms should be on the sunny side of the house, and far enough away from the family living-room to avoid any one's being disturbed when armies charge up and down the play-room battle-ground or Indians start out on the warpath.

The best floor covering for a day nursery is plain linoleum, as it is not dangerously slippery and is easily kept clean. If the floor is hard wood, it must not have a slippery wax finish. It will also save tumbles if the day nursery has no rugs, but the night nursery ought to have one large one or several small ones by the beds and in front of the open fire. Washable cotton rugs are best to use for this purpose.

When children are very small, it is necessary to have sides to the beds to keep them from falling out. The beds should be placed so that the light does not shine directly in the children's eyes in the morning, and there should be plenty of fresh air. The rest of the night nursery furniture should consist of a dressing-table, a chest of drawers, a night table and some chairs. There should be a few pictures on the walls hung low, and beautiful and interesting in subjects and treatment. The fire should be well screened.

Pictures like the "Songs of Childhood," for instance, would be charming simply framed. If there is only one nursery for both day and night use, the room should be deco-
rated as a day nursery and the bed-cover made of white dimity with a border of the curtain stuff or made entirely of it.
Curtains
Curtains

The modern window, with its huge panes of glass and simple framework, makes an insistent demand for curtains. Without curtains windows of this kind give a blank, staring appearance to the room and also a sense of insecurity in having so many holes in the walls. The beautiful windows of the seventeenth and eighteenth centuries in Italy, England and France, give no such feeling of incompleteness, for their well-carved frames, and over-windows, and their small panes of glass, were important parts of the decorative scheme. Windows and doors were more than mere openings in those days, but things have changed, and the hard lines of our perfectly useful windows get on our nerves if we do not soften them with drapery. In that hopeless time in the last century called "Early Victorian," when black walnut reigned supreme, the curtains were as terrifying as the curves of the furniture and the colors of the carpets. Luckily most of us know only from pictures what that time was, but we all have seen enough remnants of its past glories to be thankful for modern ways and days. The over-draped, stuffy, upholstered nightmares have entirely disappeared, and in their place have come curtains of a high
standard of beauty and practicality — simple, appropriate, and serving the ends they were intended for.

The effect of curtains must be taken into account from both the outside and the inside of the house. The outside view should show a general similarity of appearance in the windows of each story, in the manner of hanging the curtains and also of material. The shades throughout the house should be of the same color, and if a different color is needed inside for the sake of the color scheme, either two shades should be used or they should be the double-faced kind. Shades should also be kept drawn down to the same line, or else be rolled up out of sight, for there is nothing that gives a more ill-kept look to a house than having the shades and curtains at any haphazard height or angle.

And now to "return to our muttons." The average window needs two sets of curtains and a shade. Sometimes a thin net or lace curtain, a "bonne femme," is hung close to the glass, but this is usual only in cities where privacy has to be maintained by main force, or where the curtains of a floor differ greatly. Thin curtains in combination with side curtains of some thicker material are most often used.

Curtains either make or mar a room, and they should be carefully planned to make it a perfect whole. They must be so convincingly right that one only thinks at first how restful and pleasant and charming the whole room is; the details come later. When curtains stand out and astound
one, they are wrong. It is not upholstery one is trying to display, but to make a perfect background for one's furniture, one's pictures and one's friends.

There are so many materials to choose from that all tastes and purses can be suited; nets, thin silk and gauzes; scrims and batistes; cotton and silk crepes, muslin or dotted Swiss, cheesecloth, soleil cloth, madras, and a host of other fascinating fabrics which may be used in any room of the house. The ready-made curtains are also charming. There are muslin curtains with appliqué borders cut from flowered cretonne; sometimes the cretonne is appliqué on net which is let into the curtain with a four-inch hem at the bottom and sides. A simpler style has a band of flowered muslin sewed on the white muslin, or used as a ruffle. It is also added to the valance. There are many kinds of net and lace curtains ready for use that will harmonize with any kind of room. Some of the expensive ones are really beautiful examples of needlecraft, with lace medallions and insertions and embroidery stitches.

When it comes to the question of side curtains the supply to choose from is almost unlimited, and this great supply forms the bog in which so many are lost. A thing may be beautiful in itself and yet cause woe and havoc in an otherwise charming room. There are linens of all prices, and cretonnes, both the inexpensive kind and the wonderful shadow ones; there are silks and velvets and velours, aurora
cloth, cotton crêpe and arras cloth, and a thousand other beautiful stuffs that are cheap or medium-priced or expensive, whose names only the shopman knows, but which win our admiration from afar. The curtains for a country house are usually of less valuable materials than those for a town house, and this is as it should be, for winter life is usually more formal than summer life. Nothing can be prettier, however, for a country house than cretonne. It is fresh and dainty and gives a cool and delightful appearance to a room. Among the many designs there are some for every style of decoration.

The height and size of a room must be taken into account in hanging curtains, for with their aid, and also that of wallpaper, we can often change a room of bad proportions to one of seemingly good ones. If a room is very low, a stripe more or less marked in the design, and the curtains straight to the floor, will make it seem higher. A high room may have the curtains reach only to the sills with a valance across the top. This style may be used in a fairly low room if the curtain material is chosen with discretion and is not of a marked design. If the windows are narrow they can be made to seem wider by having the rod for the side curtains extend about eight inches on each side of the window, and the curtain cover the frame and a part of the wall. This leaves all the window for light and air. A valance connecting the side curtains and covering the top of the net curtains
The dignity of the shaped valance is required in formal rooms
A charming window treatment, in a room whose color scheme is carried out in the garden, giving a unique and delightful touch.
CURTAINs

will also make the window seem broader. A group of three
windows can be treated as one by using only, one pair of side
curtains with a connecting ruffle, and a pair of net curtains
at each window. Curtains may hang in straight lines or be
simply looped back, but fancy festooning is not permissible.
There is another attractive method of dividing the curtains
in halves, the upper sections to hang so they just cover the
brass rod for the lower sections, which are pushed back at
the sides. These lower sections may have the rod on which
they are run fastened to the window-sash if one wishes.
They will then go up with the window and of course keep
clean much longer, but to my mind it is not so alluring as a
gently blowing curtain on a hot day. I have seen a whole
house curtained most charmingly in this manner, with curt-
tains of unbleached muslin edged with a narrow little ruffle.
They hung close to the glass and reached just to the sill with
the lower part pushed back at the sides. The outside view
was most attractive, and the inside curtains varied according
to the needs of each room.

Casement windows should have the muslin curtains drawn
back with a cord or a muslin band, and the side curtains
should hang straight, with a little top ruffle; if the windows
open into the room the curtains may be hung on the frames.
The muslin curtains may be left out entirely if one wishes.
Net curtains on French doors should be run on small brass
rods at top and bottom, and the heavy curtains that are
drawn together at night for privacy's sake should be so hung that they will not interfere with the opening of the door. There should be plenty of room under all ruffles or shaped valances where the curtains are to be drawn to allow for easy working of the cords, otherwise tempers are liable to be suddenly lost.

All windows over eighteen inches wide need two curtains, and the average allowance of fullness is at least twice the width of the window for net and any very soft material, while once and a half is usually enough for material with more body. Great care must be taken to measure curtains correctly and have them cut evenly. It is also a good plan to allow for extra length, which can be folded into the top hem and will not show, but will allow for shrinking.

Stenciling can be very attractively used for curtains and portières for country houses. Cheesecloth, scrim, aurora cloth, pongee, linen, and velours, are a few of the materials that can be used. The design and kind used in a room should be chosen with due regard to its suitability. A Louis XVI room could not possibly have arras cloth used in it, while it would be charming and appropriate in a modern bungalow. Arras cloth with an appliqué design of linen couched on it makes beautiful curtains and portières to go with the Mission or Craftsman furniture.

There is an old farmhouse on Long Island that has been made over into a most delightful country house, and the
furnishing throughout is consistent and charming. The curtains are reproductions of old designs in chintz and cretonne. The living-room, with its white paneling to the ceiling, its wide fireplace, old mahogany furniture, and curtains gay with parrots and flowers, hanging over cool white muslin, is a room to conjure with.

In town houses the curtains and hangings must also harmonize with the style of furnishing. When the windows are hung with soft colored brocade, the portières are usually beautiful tapestry or rich toned velvets, and care is always taken to have the balance of color kept and the color values correct. There are silks and damasks and velvets, and many lesser stuffs, made for all the period styles, whether carried out simply or elaborately, and it is the art of getting the suitable ones for the different rooms which gives the air of harmony, beauty, and restfulness, for which the word home stands.

In hanging these more formal curtains the shaped valance is usually used with the curtains hanging straight at the sides of the window, so they can be drawn together at night. The cords and pulleys should always be in perfect working order. Another method is to have the curtains simply parted in the center, either with a valance or without, and drawn back at the sides with heavy cords and tassels, or bands of the stuff. If a draped effect is desired great care must be taken not to have it too elaborate.
If the walls of a room are plain in color one may have either plain or figured hangings, but if the wall covering is figured it gives a feeling of unrest if the curtains are also figured. Sometimes one sees bedrooms and small boudoirs where the walls and curtains show the same design, but it must be done with skill, or disaster is sure to follow.

Plain casement cloth or the different "Sunfast" fabrics are attractive with plain or figured papers, especially in bedrooms of country houses.

If one has to live in the town house through the summer do not make the fatal mistake of taking down the curtains and living in bare discomfort during the hot season. If the curtains are too handsome to be kept up, buy a second set of inexpensive ones that can be washed without injury. It is better that they should stop the dust, and then go into the tub, than that one's lungs should collect it all. Curtains are useful as well as ornamental, and a house without them is as dreary as breakfast without coffee.
Rugs
Rugs

In solving the rug problem for our homes one must look the matter squarely in the face and decide how far one can wander in the Oriental field, for where Oriental rugs are, there is beauty also; they are works of art, things to be treasured and to be thankful for. Machinery has made many things possible for us, it has simplified, and also complicated life, it has made the East and West, the North and South, close neighbors, it has harnessed the air and electricity, but for all its wonder it is dependent on the brain and hands of man. There is no machine in all the world, however, that has made anything so beautiful as a Persian rug, fashioned by the ten clever fingers of an Oriental directed by his patient and beauty-loving soul and mind.

One of the charms of rug lore is the feeling that back of a rug stands a personality, the history of a family, a tribe, a whole people, stretching far away into the past. The wild and warlike tribes of the frontier, as well as the more peaceful dwellers of the towns, had their special colors and patterns which descended from generation to generation. The wandering tribes of Asia have, since the earliest times, used rugs for all their household furnishings. They used them for curtains, for seats and beds, and saddle coverings, for
prayer rugs and funeral rugs, and as seats of honor. The antique Hamadan rugs were "hearth" or "home" rugs and were looked upon as sanctuary by the tribe. If a fugitive once reached the sheik's tent and touched the rug the tribe was in honor bound to protect him.

The looms upon which the rugs were woven were, and still are, of the rudest construction, uprights supporting two horizontal poles on which the warp threads were stretched. In front of these looms sat the women tying in the knots one by one, slowly developing a work of art. In some districts a simple musical chant is sung to help the weavers tie the knots, and the fineness of the rug depends upon the number of knots in a square inch, a coarse Turkish rug having as few as thirty or forty, and a fine Persian as many as four or five hundred to the square inch. Rugs are still made in the old way. Children of six and seven begin to learn by tying in solid colors, and slowly advance until they can be trusted with the designs, and then a whole rug. There are two kinds of knot used — the Senna or Persian, and the Ghiordes or Turkish. The Senna has a thread of the pile coming up between every warp thread, and makes a very close and fine pile which can be closely trimmed, and shows the design until almost the last thread is gone. The Ghiordes knot has the pile thread come up between every two threads of the warp, which makes a coarser rug and necessitates a longer pile to cover the warp. This longer pile, becoming untwisted, gives
A rare antique Persian rug, depicting the Judgment of Solomon. It came originally from the Shah's palace, measures about 6 x 9 ft. and is valued at $3,500
A typical modern Bokhara with the customary red predominating, 4 ft. 3 in. x 3 ft. 5 in., valued at $55

A soft-colored Kirmanshah, 6 ft. 7 in. x 4 ft. 4 in. valued at $130
a very beautiful silky sheen to some Turkish rugs. For some reason the finest wool is found on the sheep and goats of Turkey and Persia and the country around the Caspian Sea. It is collected at certain times of the year, and washed and washed in soft water, then covered with flour paste and then washed again. It is then dried in the sun and wind, picked apart, and then spun. The skeins are again washed and soaked in a mordant and dyed with vegetable dyes. These dyes are made with great care, and certain families had the secret of certain colors, passing it down as a valued possession. It was a great honor to be a famous dyer. It is an interesting fact that in antique Persian rugs where black was used to outline the design it has entirely disappeared, letting the warp show in its place. The other colors only grow more beautiful with the softening effect of time.

The use of aniline dyes is unfortunately creeping into many rug districts, but is strictly forbidden in Persia and Smyrna, and is punishable with a heavy fine. Russia has not been so particular in her new possessions, and one thinks with dread of the harm she may do in Persia.

A well and properly washed rug, and a chemically washed rug, are two quite different propositions. There is a great love in the Orient for strong colors, and many of the most beautiful soft toned antique rugs were probably very bright, indeed, in the days of their youth. The vegetable dyes in use are beautiful, but bright colors, and a new rug is often
too vivid for Western taste, so it has to be washed to soften and tone it to the required standard. Trustworthy dealers have a process by which this is done without injury to the rug. It simply washes out all the superfluous dye, and leaves fast colors, without injuring the life or elasticity of the wool. There are not many good modern rugs which have not been washed, but it is safe to buy them only of reputable dealers whose methods can be trusted. If an antique rug is washed it loses a great part of its value.

The chemically washed rug is put upon the market for the simple reason of deceiving the buyer. If it is made to look old and faded enough it can be sold to the unwary as an antique at a greatly advanced price. A rug chemically "washed" or "doctored" is first stretched on an inclined platform and a solution of chlorine water is allowed to trickle over it. When the colors are sufficiently subdued the rug is dampened with glycerine and water and ironed with hot irons to give it luster. Some say that rugs are buried and dragged in the dirt to give them the required look of age. There is a harsh feeling to a chemically treated rug and the back is much brighter in color than the pile, while the threads are also brighter at the base than on the surface and often a different color, as aniline dyes seem to separate as they change. Green, being made from yellow and blue, will have the blue depart and leave the yellow behind, for instance. Vegetable dyes fade to a lighter shade of the same color.
RUGS

A chemically washed rug has lost many years of its life. One must be on one's guard and buy only from trusted dealers whose reputations stand back of their wares, and who will not ask you to pay for an antique and sell you a modern badly washed rug. The look of age is beautiful, but antiques are rare, and manufactured age is often only a waste of money. To be an antique, a rug must be at least fifty years old, for it takes about that length of time to soften and tone it to its full beauty. The gems of the sixteenth and seventeenth centuries are almost impossible to find and are worthy of a place in museums.

Both Turks and Persians are Mohammedans, but belong to different branches of the faith. The Turks are Sunnites, and believe that if they make anything in the form of a living creature they will have to give it their soul on the day of Judgment, hence their designs are geometrical. The Persians, who are of the more liberal Shiite sect, are troubled by no such ideas, and birds and beasts and beautiful floral forms appear in their designs. The wonderful old and very rare royal hunting rugs show most realistic scenes of the chase in full swing.

It is interesting to try to follow out the meaning of the different designs. Many, of course, are quite hidden from us, but from the rest we can piece together much of deep interest. A Persian rug is often supposed to represent a garden. The loop, or pear, or palm design, has several
meanings, and one may take one's choice. Some say it is from the loop of the sacred river of India as it is seen winding its glittering way across the plain, and this would explain why it is so often filled with floral forms; some say it is from the palm; others say it originated with the fire-worshipers and represents a flame. It is the beautiful form seen on old cashmere shawls. To follow out a little more of the symbolism found in rugs we find that the rosette, used in borders and to form other designs, is based on a wild flower, which we call the Star of Bethlehem. The cypress tree was used on funeral rugs, and lamps and animals and flowers are often conventionalized so successfully that they form the most satisfactory designs. The swastika, common to nearly all the world, means health, happiness and good luck. The circle means eternity; a six-pointed star means Allah, a meandering line or border means the continuity of life; and when a bead or tassel is found fastened into the center or border it is to keep off the evil eye; and so it goes on, making a rug a book, or a page from the worker's life and belief. The whole rug is supposed to represent eternity, and that is why we so seldom find the old patterns with a plain field,—for to make all eternity a blank would be indeed a dreary thing, and the weaver scattered flowers and figures over it to insure happiness.

One of the most beautiful rugs in the world is the sacred carpet of Ardebil, now at the South Kensington Museum.
It is 34\(\frac{3}{4}\)"x17\(\frac{1}{2}\)" and its soft and rich tones of blue and yellow ivory are used in a beautiful floral design, while great interest is added to it by the inscription in a medallion in the border: "I have no refuge in the world other than thy threshold. My head has no protection other than this porch way. The work of the slave of this holy place, Maksond of Kashan, in the year of the Hegira 946." (A.D. 1540.) This rug was nearly the cause of a rupture between England and Persia in the days of Queen Elizabeth, for the ambassador she sent considered himself insulted when he was asked to wear slippers over his shoes when he stepped upon its sacred and beautiful surface.

Persian rugs are divided into several sections, according to the neighborhood in which they are made — Kirman and Kirmanshah, Tabriz, Senna, Khorassan, Meshed, Shiraz, Saraband, Gorevan, Hamadan, and others.

Kirmanshah and Kirman are beautiful in texture with a soft and mellow richness of color, and a delicacy and sureness of design which makes them among the most perfect rugs made. There is usually a medallion center surrounded by a field of ivory, covered with lovely floral designs in soft pinks and greens and blues. There are several borders all beautifully shaded. These rugs come in all sizes, from small mats to large carpet size, and are especially suited to drawing-rooms and reception-rooms where French or Georgian furniture is used.
The modern Tabriz rug is not so beautiful as the Kirman-shah or Khorassan as it does not keep to the old standards either in color or design, but shows a strong European influence. The texture is firm and they are closely clipped and seldom show any luster. They come in all sizes, and one can have any design or color scheme carried out to order. An antique Tabriz rug has great beauty, and shows the graceful floral design which is characteristic of Persia.

Senna rugs are among the finest antique or modern rugs made, and come in only a few designs, either the all-over pattern of the palm or “fish” design; or one with the center divided into medallions. There are usually three borders, the center one wider than the others. The colors are soft and subdued, and beautifully blended: reds, yellows, blues, pink, ivory, green. The pile is closely clipped and is of silky wool. They are rarely larger than 5 x 8.

Khorassan rugs bear all the marks of the highest Persian ideal. The wool is very fine and silky, the soft rich colors of old blue and a wonderful soft red, are used chiefly as background colors in the field on which the floral designs are placed. Often a medallion is placed on a plain field with the four corners cut off, and again the floral design will cover the whole field. There is apt to be a slight unevenness in the clipping, causing the pattern to stand out a little more distinctly. The sides are overcast and the ends finished with fringe. This rug is suitable for drawing-rooms where one
wishes stronger tones than Kirmanshah rugs give. They are well adapted to libraries, living-rooms and halls, and country houses—and come in all sizes.

Meshed, the capital of Khorassan, is a sacred city, for the shrine of the prophet Iman Riza is there; it was the home of the great Haroun-al-Raschid and of Omar Khayyam. The religious influence is very strong, and not only are beautiful rugs made there, but many are brought from other parts of Persia, as offerings. In design they are much like the Khorassan rugs, but are lighter in color and more closely clipped. They come in all sizes up to very large carpet size.

Shiraz rugs are made in so many floral and geometrical designs that it is often hard to distinguish them. Two distinctive marks, however, are that the sides are overcast in two colors, and the ends are usually finished with a colored selvage and long fringe. They usually have a dark blue field with flowers and birds and animals in greens, blues and yellows. They come in medium and some carpet sizes.

Saraband rugs are still made after the old patterns. The design is made up of rows of small palm pattern facing in opposite directions, and this central field is bounded by many borders. The colors are dark blue, rich red, rose, and ivory. They come in all sizes and would be very attractive in living-rooms, dining-rooms, libraries, and halls.

Ghorevan rugs are made in the district of Heraz, and the modern product, for a wonder, are often superior to the
old. The designs and colors are bold and strong, but harmoniously blended, the colors being chiefly blue, green, red, ivory, and brown. They come in carpet sizes.

Serapi and Bakshaish rugs are made in this district also, but are finer grade and softer in color. They come only in large sizes about $8 \times 10$ up to $15 \times 25$. No dainty or delicate furniture could be used in a room with them. They would be good for living- and billiard-rooms, bungalows and certain country homes.

Hamadan rugs of modern makes are coarse in texture. The design is usually a medallion in the center with cut off corners, and several borders bounded by a plain band of camel's hair.

**TURKISH RUGS**

Turkish rugs are made in Asia Minor, chiefly in Anatolia and Kurdestan, and the Ghiordes knot is generally used. The designs are geometrical, as no animal forms are allowed by religion to be depicted.

Constantinople is the great rug center of the Orient, for there are gathered together all the rugs from the different districts, and there the buyers from all over the world come to haggle and bargain. The real gems are growing scarcer and scarcer, but the demand for Oriental rugs is steadily growing greater as people in general are becoming better acquainted with their beauties. It is this great demand which has
Antique Anatolian rug

Fine silk Persian

A rare antique Saraband rug, 6 ft. 11 in. x 4 ft. 3 in., valued at $1,000
An antique Chinese rug in wonderful blues and tans, showing some of the happy symbolism that is common to Chinese art.
opened the door to commercialism and introduced the use of aniline dyes. Unfortunately the standard was not generally high enough nor the knowledge great enough on the subject among Americans and Europeans when the tide turned in that direction. The great mass of the people, still dazzled by the bright colors of the Victorian era, were not so alive to the dangers of aniline dyes. Now, however, they are rapidly becoming educated in rug lore, and the demand is for the old ideals of beauty of color and design and texture. This may have led to the evils of washing, but we may hope that is only a step in the right direction. In many parts of Asia Minor, the home of the Turkish rug, the old methods of weaving and dyeing are still carried on. The lately deposed Sultan established a school where beautiful antiques are copied and the designs carefully studied, and the pupils thoroughly trained in all the ideals of the past, but simplified as much as possible by modern methods.

The antique Ghiorides prayer rug is one of the most beautiful rugs ever made, and examples of it are very rare and precious, in fact they are worthy of being wall hangings where one can feel their great beauty of color and design. The center of the rug was a plain color, blue, green, yellow, red, or ivory, and gave the color tone to the whole rug. The mosque door, or prayer point, was supported on two columns, and from the point hung a temple lamp, while the spandris
were fitted with floral designs. There were usually three borders, and sometime seven, or more, with narrow strips between, which gave a lovely effect to the whole. The pile was closely cut and was almost without luster. They were about four by six feet. The modern Ghiordes cannot compare in any way these treasures of a past day.

Prayer rugs are made by nearly all rug weavers, as they are used by all the Faithful, and when the call to prayer comes the rug is laid upon the ground with the point toward Mecca and the true believer prostrates himself with his forehead on the point and his hands outstretched. Many rugs have the hands worked into the design. When there are two or more niches the rug is meant for several people to use at once.

Kulah prayer rugs are much like the Ghiordes, but differ in having a floral pattern running the length of the field and there is also a slight difference in the shape of the arch. These antique Kulahs are also far superior to the modern make, and like the antique Ghiordes are worth a small fortune. The modern Kulah in spite of its coarse texture is made of long silky wool and is one of the better grades of Turkish rugs, although some aniline dyes are used. They come in carpet size.

The antique Bergamo is also much prized, and the modern ones have merits in the way of a beautiful sheen. The field is usually covered with medallions and geometrical
patterns and wide borders. The colors are rather bright, but of medium value.

Bokhara rugs are the best known of the Turkoman rugs, and are of a uniform geometrical design repeated regularly over the field and finished with geometrical borders, usually the same design in a different size. The color is a rich dark red or wine color. They come in many sizes, sometimes fairly large, and are beautiful for living-rooms, libraries, dining-rooms, and other rooms where a warm beautiful red is desired.

Beluchistan rugs come in lovely shades of soft dark blue and rich red, with geometrical figures in brown, ivory, green, and maroon, with a bluish tone over all. They come in small and hearth rug size.

Antique Indian rugs were founded on Persian designs with the Hindu feeling giving them a characteristic touch. The colors were strong, but beautifully blended and harmonious.

The modern Indian rug is made chiefly in factories, with vegetable dyes and of the best materials. The old designs are not strictly adhered to, as any and all are copied, and any special colors wished for will be used. They are made in all sizes.

Chinese rugs are a study of soft blues and yellows and ivory and wonderful soft reds, and are among the most beautiful rugs in the world. They are well balanced in design
and full of interesting symbolism, for they worked their religious symbols into their rugs, and the "eight precious things," and the "eight lucky emblems" the bat, the stork, fishes, the prune, different flowers and trees and many other things are all there with their meanings of long life, eternity, prosperity, and happiness. There is a golden glow or bloom over them which is quite impossible to describe, and which must be seen to be appreciated in its full beauty.

This necessarily very short account of Oriental rugs leaves out many kinds which should be mentioned, and also the necessary descriptions of and classification of them. It is such a big subject in itself that space forbids it being more than touched upon, but I hope that anyone who is planning to buy Oriental rugs will care to know more of the subject. Many valuable books of plates and text and wonderful collections in many museums and private houses, may be thoroughly studied, so that one of our household necessities may have, for all, the life and interest which the subject possesses.

The price of modern Oriental rugs varies from about $1.50 to $10.00 a square foot; some are more and some less. There is no fixed price for antiques, as so many questions enter into the matter, but they are difficult to get, at best, and well worth the prices asked, which range from about $10.00 to several hundreds a square foot.

The following short list will give an idea of the cost of
modern rugs as sold in the general market. Kirmanshah $1.75 to $6.00 a square foot, Kirman $2.00 to $5.00, Khorassan $1.50 to $8.50, Gorevan $1.25 to $8.50, Tabriz $8.00 to $10.00, Senna $2.00 to $6.00, Saraband $2.00 to $6.00, Daghestan $1.00 to $3.00, Khiva Bokhara $1.25 to $2.00, Tekke Bokhara $2.00 to $6.00, Beluchistan $1.00 to $2.50, Chinese .25 to $5.00.

The Shahrizan is one of the finest modern Oriental rugs made, as they are absolutely reliable, and any design can be copied. The colors are beautiful, and the pile is fine. They cost $5.00 and $9.00 a square foot, and defy wear. They are the kind to become valued antiques in the course of time.

It is one of the minor tragedies of life to know and love Oriental rugs, and not be able to have them for one's own, for it takes real philosophy to see them in all their beauty and then to stay contented with a domestic imitation.

The great carpet and rug manufacturers have wakened to the necessity of floor covering of good design and are trying to meet the demand and give us cause for real content, and in the last few years giant strides have been taken in domestic rug making. Many of these rugs have real worth and beauty of design and color, and are close copies, so far as machinery allows, of Oriental ones, and are really far better than some of the crude and ugly ones which are sold at high prices simply because they come from the Orient.

Plain carpets or rugs are apt to be much more satisfactory
in effect in many rooms than figured carpets or rugs, and there are several makes which are durable and beautiful in texture and color. They can be made in any size with a two-toned or band border and match any color scheme. They make a restful and charming foundation for a room. They range in price from $8.00 to $15.00 a square yard.

Among the best makes of domestic rugs are Whittal's Anglo-Persian, and others; Hartford-Saxony rugs; the different rugs made by the Bigelow company; all of these firms make rugs of the best grade, and if one chooses with care and with due regard to the color, one may well be satisfied with the result. There are many grades of Axminster, and Inverness or Scotch reversible are both useful and charming in many rooms, as they have a plain center and a two-toned border. American Aubusson carry out this same idea, and are cheaper. English ingrain rugs come in attractive colors and designs for bedrooms and country houses. There are other weaves of plain rugs, with borders a tone or two darker than the center, which are beautiful and useful, and fit with dignity into many schemes: in fact they are safer to choose than a figured rug. There is also the plain velvet carpeting which comes in rug width and in many beautiful colors. There are also many rugs made which are suitable for bungalows and simple country houses and camps, to say nothing of the porch, and woven rag rugs have come to stay. These rugs vary in price in different parts of the country, but a
general idea may be gained by beginning with $12.00 for a woven rag rug up to about $95.00, all in the 9 x 12 size. One can buy a very good domestic rug for $50.00, or $60.00 either in an Oriental design or one of the better grade plain makes. A 9 x 12 Inverness rug costs about $27.50, while an American Aubusson in that size costs about $18.00. Oriental rugs vary in price from about $1.50 a square foot, up to a much higher price, depending on the kind, the quality, the number of knots to the square inch, and the age. The price of antiques is of course more or less arbitrary as it is fixed by the rarity of the rug as well as its beauty. One can buy a very good rug in some of the modern Turkish or Persian or Turkoman weaves in about a 9 x 12 size for from $200.00 to $300.00, and of course more if one wishes. The sizes are not absolutely cut and dried, as in machine-made rugs, but vary a few inches one way or the other. Antique Chinese rugs are among the most expensive and are so beautiful that they are well worth the price asked for them.

So, with all the Orient, past and present, spread out before one, and rug manufacturers beginning to feel the importance of the opportunity, there seems to be no reason why we should not have beautiful floor coverings, if we will only realize that much of the solving of the problem rests with us. The floor and its covering is such an important part of the successful decoration of a house that one must never give up the search until just the right thing is found.
buying a rug the color scheme of the room must be carefully taken into account, so that there will be no clash and the floor will keep its proper place in regard to the rest of the room. If one already has a rug it should be the keynote to build the scheme upon. Rug dealers are usually willing to send rugs to a house on approval, so that they can be seen in the surroundings in which they are to be. In placing a rug upon the floor one is often disappointed to find the color wrong, but do not despair until it has been turned with the nap going the other way, as the light striking the rug, either with, or against the nap, makes a great difference in tone. I have seen what seemed an impossible rug turn a room into a perfect color harmony by this simple process.
Making the Porch More Livable
Making the Porch More Livable

ONLY a few years ago a porch was a porch to the average person (like the famous primrose to Peter Bell), "and it was nothing more." Now porches and piazzas have come into their own and they help vastly in bringing more gayety and pleasantness and healthfulness into our lives. Wherever one turns one finds the furnished porch; for sleeping, for dining, for living-rooms, it may be large or it may be small, it may be built for the purpose, or it may be a makeshift, but the ideal of outdoor living is there and is steadily gaining ground, and everyone tries to have at least a small portion of the open where they can be comfortable and where mosquitoes cease from troubling and spiders are at rest.

The ideal porch is broad and large enough to allow one always to find a shady and protected spot. It should be so planned that it is an absolutely necessary and convincing part of the architecture and not an excrescence or afterthought that it so many times seems to be. It may be an open porch or have pillars supporting beams or a roof, or it may have only a balustrade or a low wall or coping with a broad and comfortable top. Low easy steps should lead to the driveway and garden, awnings and vines should cast a
pleasant shade, and shrubbery and gay flower borders add to its charm. The chairs should be so arranged that the best views are taken advantage of without the trouble of moving the furniture.

One may not be able to have one of these large and entrancing porches, but that is no reason for going without one entirely. A summer in town is not so bad if one can find some place about the house where a porch or a loggia or a little balcony may be tucked. With boxes of vines and plants on the railing, a swinging seat, a comfortable wicker chair, some cushions, a table and an awning or bamboo curtain if necessary, one has the possibility of many happy hours.

A porch can easily be made most attractive and livable and really amount to an extra living-room. There are many different kinds of suitable furniture made, and it goes almost without saying that it should be of a kind not easily hurt by a sudden shower. In heavy storms it is of course pushed out of harm's way, but upholstery and expensive covering for the cushions are out of the question.

Willow or wicker furniture is always good, and may be left the natural color or stained as one wishes. It is something to be thankful for, that elaborate designs are not often seen nowadays; good and simple lines are what people want, and it is easier to find them than it was a short time ago. Removable cushions covered with cretonne, linen, India cotton, Russian crash, denim, Turkey red, etc., are all used, the
A home-like and inviting porch. The reversible rugs are especially well suited to the purpose.
Who can deny the charm of this terrace? An unobstructed view of distant hills is a great addition to the sum of human happiness.
colors and materials to harmonize with the general scheme of the house and garden. Another kind of furniture suitable to porches is called India splint. It is built somewhat on Mission lines, but is not so heavy and is very attractive. Everything needed is made in it, from seats and swings to curate's assistants, and it is usually stained a soft and pleasant brown. Rustic or splint furniture is always good and can be stained any color desired; and then there is the rustic furniture made of branches, which, when it is well built, is appropriate for camps and bungalows in the woods, or for garden seats. Mission furniture is well suited to porches if it is of one of the best makes and not the extraordinarily heavy and clumsy kind that we too often see. Terrace furniture made of cypress and painted white is most attractive. There are chairs of all kinds, tables, settees, swings on chains, tea wagons, screens, everything, in fact, that can possibly be needed in these different kinds of furniture.

The rugs that are most appropriate to use are matting and prairie grass, Algerian fiber, Japanese cotton and jute, woven and hooked rag rugs, bungalow rugs, and some Axminster and Wilton, and Scotch reversible. Very valuable rugs are out of place for out-of-door service as a usual thing.

Colors for porch furnishings should take their keynote from the color and style of the house. The gray of concrete or plaster, the soft red or beautiful variegated colors of
FURNISHING THE HOME OF GOOD TASTE

brick, the white or yellow of Colonial houses, or the browns and moss greens of shingles, all call for a variation of treatment. As a general thing we can stand gayer colors out of doors than in the house, for the kindly atmosphere treats them as it does the bright colors of flowers and seems to give them the needed softening touch. Bright red, which can be used to advantage in a cool climate, is often too hot looking unless it harmonizes perfectly with the color scheme. Yellow, and some greens, do not fade so rapidly as blue, but most pale colors vanish as if by magic in hot sun and sea air.

Curtains of heavy material, with or without a stenciled border, are often used to hide the service end of the house from view, but thick vines are really better. If one wishes a vine screen that will grow rapidly and last well through the season the Cobœa is most satisfactory.

If there is a bay-window, looking out upon the piazza, a window-seat built around it is a good idea. It gives many extra seats and is an attractive feature when covered with cushions to match the others. It may be like the woodwork or like the furniture, as one pleases. A shelf for magazines, with weights to keep them from blowing about, is a godsend, and also a nest of tea-tables will be found most useful.

Of course we all know there are no mosquitoes in any well regulated summer place, but still, accidents may happen, and a strong wind may blow them from the little town across the bay, or the salt marsh five miles away — it is odd how often
that wind seems to blow, and it is well to be prepared by having a part of the porch screened; it adds wonderfully to one's comfort. A simple way to screen a portion of the porch is to use black mosquito netting, six feet wide. Have it tacked carefully to the posts and woodwork and cover the edges with narrow molding painted to match the woodwork. One can enter from a door or French window from the house, and a hedge of plants across the piazza just outside the netting will keep people from walking into it.

And now a word or two about sleeping-porches. The custom of sleeping out-of-doors is becoming more and more common, and people who have faithfully tried it all the year 'round say that they feel fairly boxed up when obliged to sleep indoors. The fearful test of one's theories comes on the first cold night. I heard of one person who enjoyed it through the summer and autumn, and then one night late in November the mercury suddenly dropped to the neighborhood of zero. His New England conscience began to work on the subject of the furnace and drove him to his duty. Then came the tug of war. Should he crawl back into the fearful cold or go to his comfortable room? The porch won, and now all the members of the family follow his good example. A sleeping-porch, to be successful, should be well screened in summer and be as airy and open as possible. The couch, or couches, should be so placed that they are protected from the rain. Gloucester hammocks, made of canvas,
swung on chains from the roof, are very comfortable. The porch should open from a well warmed dressing-room if it is used in winter. With flower-boxes along the railing and an awning it will make a very charming little upstairs sitting-room during the day. One could get a great deal of pleasure from it for one could lie in the hammock and read in peace without the fear of being interrupted by a sudden descent of callers.

A rival that is pressing hard upon the triumphant way of the porch is the paved terrace. It certainly has its charms, and also, like the porch, it has its drawbacks. It takes no light from the living-rooms of the house, but it is open to the weather, and in case of a sudden shower one has to fly. Awnings can of course be put up, and there is a charm and dignity about a terrace that a porch fails to give. I really think that both are necessary to the perfect country house. A terrace usually has a stone coping with broad steps leading down to the garden. Shrubs in carved stone or molded terra-cotta jars are placed at intervals; rugs can be spread on the tiled or brick pavement, carved stone seats or heavy wooden settles flank the walls and inviting chairs and tables stand about.

And so I say, if one is planning to build, by all means have both terrace and a porch. The terraces of the great English houses that have taken centuries to perfect can be our models, and with a good architect and landscape gardener we can have most beautiful ones ourselves. The garden of course
adds a great charm to any porch or terrace and must be taken into account in planning the house. A pergola, leading from the porch to the garden, covered with vines, with a fountain in the distance, is a most alluring sight. Stone seats, jars, sun-dials and simple ornaments of all kinds are made for the garden, porch and terrace, and often give the last touch that makes the whole perfect.
